

HOW DO I FLUSH A GASTROSTOMY TUBE?

Flush the tube before and after the administration of enteral nutrition or medication or 4-6 hourly (except during the night) if tube feeding is not in progress.

To prevent tube blockages, always follow the flushing advice and routine recommended by your healthcare professional.

Always check the cm markings at skin level and the length of the tube to make sure it remains unchanged, if it has changed **do not use** and contact your healthcare professional immediately.

It is important that you contact your Nutricia Homeward Nurse if you need any additional training.

Ensure the patient is positioned comfortably at an angle of 30-45°. Before and after handling the tube wash your hands with liquid soap and water and dry them thoroughly. You will need:

- 60ml enteral feeding syringe
- Water, type and volume as recommended by your healthcare professional.

ADMINISTER A WATER FLUSH USING THE PLUNGE METHOD

Draw up required volume of water in a 60ml enteral feeding syringe

Close clamp on feeding tube, if present

If no clamp is present kink the tube between your fingers to stop leakage

Remove cap from the feeding tube

Connect syringe to the tube, being careful not to over-tighten
