

- Review the 20 Risk Based Process Safety elements and select elements of immediate interest to your organization; delete the tabs of elements that you do not intend to assess. CCPS determined that at least 6 of the elements are critical to success: Process Safety Culture, Compliance with Standards, PHA, Management of Change, Asset Integrity and Reliability and Metrics.
- Review the practices for selected elements of interest. Delete any practices that may not apply to your organization. Change the language/terminology of any practices that would not be readily understood by your organization, use terms that your organization can relate to.
- Establish a multi-year timeframe to track progress to desired maturity.
- Revise scoring system if required (e.g. adding weights to practices). Simple scores used without weights in the attachment.
- Get relevant teams to complete the assessment in facilitated sessions. The facilitator must understand the tool and the language of the best practices.
- Track assessment results on radar charts.
- The benefit of self assessment is not the actual percentage scores, but rather the relative scores (low, intermediate or high level of maturity) and identification of gaps to work on.

This 2nd edition also provides how to information to determine process safety performance status implement one or more new elements into an existing PSM system maintain or improve an existing PSM system and manage future process safety performance.

Guidelines for Defining Process Safety Competency Requirements CCPS (Center for Chemical Process Safety), 2015-08-11. This Guideline presents the framework of process safety knowledge and expertise versus the desired competency level in a super matrix format vertically and diagonally. The matrix references for potential remedies required training may be tailored to a company's internally developed training reference externally available training or some combination of the two. Chapters include Identify Process Safety Roles Process Safety Competency Matrix Individual and Corporate Process Safety Competencies Conduct Assessments vs Needs Develop Gap Closure Plans and Sustaining Competencies. **Guidelines for Process Safety Documentation** American Institute of Chemical Engineers. Center for Chemical Process Safety, 1995-04-15. The process industry has developed integrated process safety management programs to reduce or eliminate incidents and major consequences such as injury loss of life property damage environmental harm and business interruption. Good documentation practices are a crucial part of retaining past knowledge and experience and avoiding relearning old lessons. Following an introduction which offers examples of how proper documentation might have prevented major explosions and serious incidents the 21 sections in this book clearly present aims goals and methodology in all areas of documentation. The text contains examples of dozens of needed forms lists of relevant industry organizations sources for software references OSHA regulations sample plans and more. *Guidelines for Process Safety in Batch Reaction Systems* American Institute of

Chemical Engineers. Center for Chemical Process Safety, 1999-09-15 A group of volunteer professionals representing major chemical pharmaceutical and hydrocarbon processing companies began working together in 1997 to describe the safe design and operation of batch reaction systems. They identify safety concerns unique to batch reaction systems, provide guidance by which engineers can identify issues in particular systems, offer a range of criteria and techniques for developing, designing, operating and maintaining systems to reduce risk and ensure the safety of people, the environment and property and list sources of specific expertise and references. They do not focus on occupational safety and health issues except as far as improved process safety can benefit nor do they go into detailed engineering designs. They do include a glossary of technical uses of otherwise ordinary words. Guidelines for Inherently Safer Chemical Processes CCPS (Center for Chemical Process Safety), 2019-11-05
Since the publication of the second edition several United States jurisdictions have mandated consideration of inherently safer design for certain facilities Notable examples are the inherently safer technology IST review requirement in the New Jersey Toxic Chemical Prevention Act TCPA and the Inherently Safer Systems Analysis ISSA required by the Contra Costa County California Industrial Safety Ordinance More recently similar requirements have been proposed at the U S Federal level in the pending EPA Risk Management Plan RMP revisions Since the concept of inherently safer design applies globally with its origins in the United Kingdom the book will apply globally The new edition builds on the same philosophy as the first two editions but further clarifies the concept with recent research practitioner observations added examples and industry methods and discussions of security and regulatory issues Inherently Safer Chemical Processes presents a holistic approach to making the development manufacture and use of chemicals safer The main goal of this book is to help guide the future state of chemical process evolution by illustrating and emphasizing the merits of integrating inherently safer design process related research development and design into a comprehensive process that balances safety capital and environmental concerns throughout the life cycle of the process It discusses strategies of how to substitute more benign chemicals at the development stage minimize risk in the transportation of chemicals use safer processing methods at the manufacturing stage and decommission a manufacturing plant so that what is left behind does not endanger the public or environment

Guidelines for Safe Handling of Powders and Bulk Solids Stanley S. Grossel, 2005 Powders and bulk solids handled widely in the chemical pharmaceutical agriculture smelting and other industries present unique fire explosion and toxicity hazards Indeed substances which are practically inert in consolidated form may become quite hazardous when converted to

powders and granules The U S Chemical Safety and Hazard Investigation Board is currently investigating dust explosions that occurred in 2003 at WestPharma CTA Acoustics and Hayes Lemmerz and is likely to recommend that companies that handle powders or whose operations produce dust pay more attention to understanding the hazards that may exist at their facility This new CCPS guidelines book will discuss the types of hazards that can occur in a wide range of process equipment and with a wide range of substances and will present measures to address these hazards *Guidelines for Process Safety in Outsourced Manufacturing Operations* CCPS (Center for Chemical Process Safety),2010-08-27 In today's competitive economy companies often augment in house production by outsourcing chemical reaction processes and distillation drying formulating blending and packaging operations While most of these tolling or contracted manufacturing services proceed without incident recent major accidents have pointed to weaknesses in some tolling arrangements such as reactivity of materials and processes This Guidelines book provides the reader with proven procedures to improve process safety throughout the life cycle of a contracted manufacturing operation Extensive checklists and examples used throughout the book make it a valuable learning tool and reference for companies conducting toll manufacturing or considering outsourcing manufacturing operations
