*Language and Human Behavior* Derek Bickerton,2016-06-01 What this book proposes to do writes Derek Bickerton is to stand the conventional wisdom of the behavioral sciences on its head instead of the human species growing clever enough to invent language it will view that species as blundering into language and as a direct result of that becoming clever According to Bickerton the behavioral sciences have failed to give an adequate account of human nature at least partly because of the conjunction and mutual reinforcement of two widespread beliefs that language is simply a means of communication and that human intelligence is the result of the rapid growth and unusual size of human brains Bickerton argues that each of the properties distinguishing human intelligence and consciousness from that of other animals can be shown to derive

straightforwardly from properties of language In essence language arose as a representational system not a means of communication or a skill and not a product of culture but an evolutionary adaptation The author stresses the necessity of viewing intelligence in evolutionary terms seeing it not as problem solving but as a way of maintaining homeostasis the preservation of those conditions most favorable to an organism the optimal achievable conditions for survival and well being Nonhumans practice what he calls on line thinking to maintain homeostasis but only humans can employ off line thinking only humans can assemble fragments of information to form a pattern that they can later act upon without having to wait on that great but unpunctual teacher experience The term protolanguage is used to describe the stringing together of symbols that prehuman hominids employed It did not allow them to turn today s imagination into tomorrow s fact But it is just this power to transform imagination into fact that distinguishes human behavior from that of our ancestral species and indeed from that of all other species It is exactly what enables us to change our behavior or invent vast ranges of new behavior practically overnight with no concomitant genetic changes Language and Human Behavior should be of interest to anyone in the behavioral and evolutionary sciences and to all those concerned with the role of language in human behavior

Ruben, 2017-09-29 The current popularity of such phrases as information age and information society suggests that links between information communication and behavior have become closer and more complex in a technology dominated culture Social scientists have adopted an integrated approach to these concepts opening up new theoretical perspectives on the media social psychology personal relationships group process international diplomacy and consumer behavior Between Communication and Information maps out a richly interdisciplinary approach to this development offering innovative research and advancing our understanding of integrative frameworks This fourth volume in the series reflects recently established lines of research as well as the continuing interest in basic areas of communications theory and practice In Part I contributors explore the junction between communication and information from various theoretical perspectives delving into the multilayered relationship between the two phenomena Cross disciplinary approaches in the fields of etymology and library science are presented in the second section Part III brings together case studies that examine the interaction of information and communication at individual and group levels information exchanges between doctors and patients children and computers journalists and electronic news sources are analyzed in depth The concluding segment focuses on large social contexts in which the interaction of communication and information affects the evolution of institutions and culture Between Information and Communication both extends and challenges current thinking on the mutually supporting interplay of information and human behavior It will be of interest to sociologists media analysts and communication specialists
