Quattrocilo, 2020-08-27 This book discusses issues relating to the application of AI and computational modelling in criminal proceedings from a European perspective Part one provides a definition of the topics Rather than focusing on policing or prevention of crime largely tackled by recent literature it explores ways in which AI can affect the investigation and adjudication of crime There are two main areas of application the first is evidence gathering which is addressed in Part two This section examines how traditional evidentiary law is affected by both new ways of investigation based on automated processes often using machine learning and new kinds of evidence automatically generated by AI instruments Drawing on the comprehensive case law of the European Court of Human Rights it also presents reflections on the reliability and

ultimately the admissibility of such evidence Part three investigates the second application area judicial decision making providing an unbiased review of the meaning benefits and possible long term effects of predictive justice in the criminal field It highlights the prediction of both violent behaviour or recidivism and future court decisions based on precedents Touching on the foundations of common law and civil law traditions the book offers insights into the usefulness of prediction in criminal proceedings
