## Compiling With Continuations:

**Compiling with Continuations** Andrew W. Appel, 2007-02-01 The control and data flow of a program can be represented using continuations a concept from denotational semantics that has practical application in real compilers This book shows how continuation passing style is used as an intermediate representation on which to perform optimisations and program transformations Continuations can be used to compile most programming languages The method is illustrated in a compiler for the programming language Standard ML However prior knowledge of ML is not necessary as the author carefully explains each concept as it arises This is the first book to show how concepts from the theory of programming languages can be applied to the production of practical optimising compilers for modern languages like ML This book will be essential reading for compiler writers in both industry and academe as well as for students and researchers in programming language theory

**Compiling Natural Semantics** Mikael Pettersson, 2005-11-20 Natural Semantics has become a popular tool among programming language researchers for specifying many aspects of programming languages However due to the lack of practical tools for implementation the natural semantics formalism has so far largely been limited to theoretical applications This book introduces the rational meta language RML as a practical language for natural semantics specifications The main part of the work is devoted to the problem of compiling natural semantics actually RML into highly efficient code For this purpose an effective compilation strategy for RML is developed and implemented in the rml2c compiler This compiler ultimately produces low level C code Benchmarking results show that rml2c produced code is much faster than code resulting from compilers based on alternative implementation approaches
