Del Casino Jr.,Natalie Marie Gulsrud,Sarah Barns,2023-10-18 Artificial intelligence AI is now mediating and in some cases seen to be controlling key urban services and infrastructures thus becoming a prominent feature of the contemporary city As portrayed in recent studies the autonomous city can be understood as a city where urban artificial intelligences perform tasks and take on roles which have traditionally been the domain of humans At stake in these debates are questions related to the meaning and ongoing role of intelligence for both humans and machines While autonomous cars transport people service robots run shops drones deliver goods and city brains govern entire cities humans are redefining the meaning of what smart means in the city and what role the human

being may play in future urban spaces With humans shifted to new sectors of the economy or pushed aside by algorithms and robotic agents creating new ways of seeing and governing the city we raise the question as to whether or not cities are becoming more autonomous from human experience in the sense that their operation does not rely as much on human inputs anymore

*The Dynamic Structure of Everyday Life* Philip Agre,Massachusetts Institute of Technology. Artificial Intelligence Laboratory,1988 A running argument means continually redeciding what to do Continually redeciding what to do is more flexible than executing a plan because it is more responsive to opportunities and contingencies It is possible to approximate the ideal of continual redecision because life is wholly a routine The routine portion of the reasoning leading to each moment s action can be implemented very efficiently by recording the reasons behind any novel bits of reasoning a method known as dependency maintenance A computer program called the running argument illustrates this point
