*Fluidware* Franco Zambonelli, Giancarlo Fortino, Barbara Re, Mirko Viroli, 2024-07-12 This book provides an overview of the many approaches that can be adopted for programming and deploying highly adaptive and large scale IoT systems with a specific focus on the key results achieved within the Fluidware research project. The authors start by presenting Fluidware which develops a novel programming model for IoT services and applications along with the associated and robust large scale IoT services and applications. Starting from previous findings in the areas of field based coordination, collective adaptive systems, stream computing and aggregate computing, the authors address the complexity of building modern large scale IoT systems by a full fledged engineering approach revolving around a new notion of distributed programming. The authors show how the key innovative idea of Fluidware is to abstract collectives of devices of the IoT fabric as sources, digesters and targets of distributed flows of contextualized events carrying information about data produced and actuating commands. The book is divided into three parts: i) the first part is a general introduction to the Fluidware ideas and to the key problems associated with programming IoT systems; ii) the second part presents the key results achieved within the Fluidware project; iii) the third part identifies open challenges and research directions.

### Critical Infrastructure Protection VI Jonathan

Butts, Sujeet Shenoi, 2013-02-17 The information infrastructure comprising computers, embedded devices, networks and software systems is vital to day to day operations in every sector: information and telecommunications, banking and finance, energy, chemicals and hazardous materials, agriculture, food, water, public health, emergency services, transportation, postal and shipping, government and defense. Global business and industry, governments, indeed society itself, cannot function effectively if major components of the critical information infrastructure are degraded, disabled or destroyed. *Critical Infrastructure Protection VI* describes original research results and innovative applications in the interdisciplinary field of critical infrastructure protection. Also, it highlights the importance of weaving science, technology and policy in crafting sophisticated yet practical solutions that will help secure information, computer and network assets in the various critical infrastructure sectors. Areas of coverage include: Themes and Issues, Control Systems, Security, Infrastructure Security and Infrastructure Modeling and Simulation. This book is the sixth volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.10 on Critical Infrastructure Protection, an international community of scientists, engineers, practitioners and policy makers dedicated to advancing research, development and implementation efforts focused on infrastructure protection. The book contains a selection of sixteen edited papers from the Sixth Annual IFIP WG 11.10 International Conference on Critical Infrastructure Protection held at the National Defense University, Washington DC, USA, in the spring of 2011. *Critical Infrastructure Protection VI* is an important resource for researchers, faculty members and graduate students as well as for policy makers, practitioners and other individuals with interests in homeland security.
