Design, Applications, and Maintenance of Cyber-Physical Systems Rea, Pierluigi, Ottaviano, Erika, Machado, José, Antosz, Katarzyna, 2021-06-25 Cyber physical systems CPS can be defined as systems in which physical objects are represented in the digital world and integrated with computation storage and communication capabilities and are connected to each other in a network The goal in the use of the CPS is integrating the dynamics of the physical processes with those of the software and networking providing abstractions

and modelling design and analysis techniques for the integrated whole. The notion of CPS is linked to concepts of robotics and sensor networks with intelligent systems proper of computational intelligence leading the pathway. Recent advances in science and engineering improve the link between computational and physical elements by means of intelligent systems increasing the adaptability, autonomy, efficiency, functionality, reliability, safety and usability of cyber physical systems. The potential of cyber physical systems will spread to several directions including but not limited to intervention, precision manufacturing operations in dangerous or inaccessible environments, coordination efficiency, Maintenance 4.0 and augmentation of human capabilities. Design, Applications and Maintenance of Cyber Physical Systems gives insights about CPS as tools for integrating the dynamics of the physical processes with those of software and networking, providing abstractions and modelling, design and analysis techniques for their smart manufacturing interoperation. The book will have an impact upon the research on robotics, mechatronics, integrated intelligent multibody systems, Industry 4.0 production systems, management and maintenance, decision support systems and Maintenance 4.0. The chapters discuss not only the technologies involved in CPS but also insights into how they are used in various industries.
