Neuroepidemiology has been perceived for a long time as a science of incidence prevalence risk factors natural history and prognosis of neurological disorders. However the other integral part of neuroepidemiology is experimental neuroepidemiology which is research based on clinical trials of effectiveness or efficacy of various interventions in neurological disorders. Neuroepidemiological researches have been conducted since 1960's with the development of epidemiological methodology and advance of the clinical neurology. Most improvement of neuroepidemiology was in western countries largely in US and European countries. This study field has been developed quite late in resource-limited areas where 60% of world's populations are living in. Disease burden of neurological disorders such as stroke, epilepsy, migraine, neurodegenerative diseases, AD, PD, multiple sclerosis, MS, amyotrophic lateral sclerosis, ALS are extremely heavy in low and middle income countries (LAMICs) especially with the increasing aging population in these regions. Because of their progressive and disabling nature these neurological disorders have major adverse personal, social, and economic consequences. Prevention and early detection are critical because there are no cures and the clinical diagnosis typically occurs after substantial and often irreversible neuronal loss.

Advances in Parkinson's Disease Research:

Exploring Biomarkers and Therapeutic Strategies for Halting Disease Progression Carmen Venegas, Anastasia Bougea, Yildiz Degirmenci, 2025-08-19 Parkinson's disease PD is the fastest growing neurodegenerative disorder being prevalent in 1% of people aged above 65 years. PD is characterized by dopaminergic neurons and the accumulation of alpha synuclein syn rich protein in Lewy bodies. Although aging is the highest risk factor for developing PD, the genetic predisposition and exposure to environmental factors such as herbicides or pesticides can induce oxidative stress, DNA damage and neuronal death contributing to PD pathogenesis. To date there is not a therapy to halt the disease. Many studies have shown multiple altered pathways offering different approaches for developing an effective therapy; however, the current therapies are merely symptomatic and they include a substitution of dopamine by the administration of Levodopa, the use of catechol O-O methyltransferase inhibitors, monoamine oxidase inhibitors, or Dopamine agonist among others. However, these treatments can only relieve some of the symptoms; they do not slow the progression of the disease and they have limited long term efficacy.

Acupuncture in Modern Medicine Lucy L Chen, Tsung O. Cheng, 2013-03-06 This book contains four integrated sections: 1. Acupuncture Research, 2. New Developments in Acupuncture, 3. Acupuncture Therapy for Clinical Conditions, and 4. Assessment and Accessibility in Acupuncture Therapy. Section 1 provides updates on acupuncture research, from acupuncture effects in modulation of immune system to the role of nitric oxide in acupuncture mechanisms. Chapters in this section offer readers the newest trends in acupuncture research. Section 2 summarizes new developments in acupuncture. The included chapters discuss new tools and methods in acupuncture such as laser acupuncture, sham needles, and new technologies. Section 3 discusses acupuncture therapy for clinical conditions. The chapters in this section provide comprehensive and critical views of acupuncture therapy and its application in common clinical practice. Section 4 takes a new look at the issues related to assessment and accessibility in acupuncture therapy. These issues are central to developing new standards for outcome assessment and policies that will increase the accessibility to acupuncture therapy.

Current Review of Complementary Medicine Mark S. Micozzi, 1999-04-14 This publication is the most up to date review of the most dynamic and controversial aspects of alternative medicine.
