Making Strategic Sense of Cyber Power Colin S. Gray,2013 Cyber is now recognized as an operational domain but the theory that should explain it strategically is for the most part missing It is one thing to know how to digitize it is quite another to understand what digitization means strategically The author maintains that although the technical and tactical literature on cyber is abundant strategic theoretical treatment is poor He offers four conclusions 1 cyber power will prove useful as an enabler of joint military operations 2 cyber offense is likely to achieve some success and the harm we suffer is most unlikely to be close to lethally damaging 3 cyber power is only information and is only one way in which we collect store and transmit information and 4 it is clear enough today that the sky is not falling because of cyber peril As a constructed environment cyberspace is very much what we choose to make it Once we shed our inappropriate awe of the scientific and technological novelty and wonder of it all we ought to have little trouble realizing that as a strategic challenge we have met and succeeded against the like of networked computers and their electrons before The whole record of strategic history says Be respectful of and adapt for technical change but do not panic Publisher description   **Military Perspectives on Cyberpower** Larry Wentz,Charles Barry,Stuart Starr,2012-07-09 During the course of nearly two years the Center for Technology and National Security Policy CTNSP National Defense University NDU has conducted extensive research to identify and explore major cyber issues These activities were performed in response to a request in the 2006 Quadrennial Defense Review QDR The result of that research is documented in a book entitled Cyberpower and National Security

Frameworks and Insights Characterizing Trends in Cyberspace and Cyberpower Franklin D. Kramer,United States. Office of Naval Research,2007 During the course of the Department of Defense s DoD 2006 Quadrennial Defense Review it was observed that DoD lacks a coherent holistic framework to formulate and assess policy issues associated with cyberspace and cyberpower To redress that shortfall the Under Secretary of Defense Policy directed the Center for Technology and National Security Policy CTNSP National Defense University NDU to undertake a cyberpower study As stated in the study s Terms of Reference there is a compelling need for a comprehensive robust and articulate cyber power theory that describes explains and predicts how our nation should best use cyber power in support of US national and security interests Consistent with that goal this paper addresses four issues First it provides a holistic framework for addressing cyberpower issues and it summarizes the major findings of several studies that are being developed to characterize that framework Second it identifies and discusses potential Measures of Merit MoMs that can be applied to layers of that holistic framework Third to illustrate the types of analyses that are being pursued a framework for tactical influence operations is introduced and applied The paper concludes with some broad observations on the nature of the cyberpower problem Abstract   *Making Strategic Sense of Cyber Power* Colin S. Colin S. Gray,2022   **Cyberpower as a Coercive Instrument** Air University (U S) School of Adva,ANN M. HALLE,2025-05-22 This thesis aims to help bridge the gap between existing knowledge of cyberspace and the practical use of cyberpower as a coercive instrument This knowledge will assist leaders at all levels to properly integrate cyberpower into a well crafted strategy This analysis demonstrates that although cyberpower has potential as an effective coercive instrument it requires further evolution to be a persistent and powerful force by itself This study examined the details of nine separate cyber attacks against the United States Estonia and Georgia Cyberpower failed to deter or compel in the cases examined The research question of this study is Can cyberpower coerce adversarial states and non state actors This study concludes that used alone cyberpower has yet to show coercive ability Used in a combined campaign with other instruments it also has yet to prove its coercive ability However cyberpower can be effective in brute

factors that are driving the evolution of cyberspace and cyberpower To support that effort the paper presents strawman principles that characterize major trends Fourth the paper connects the various elements of cyberstrategy so that a policy maker can place issues in proper context Finally the theory anticipates key changes in cyberspace that are likely to affect decision making In view of the dramatic changes that are taking place in cyberspace it is important to stress that this effort must be regarded as a preliminary effort It is expected that the theory will continue to evolve as key technical social and informational trends begin to stabilize   Cashing in on Cyberpower Mark T. Bedingfield,2011 Although coercion by cyberpower alone may be limited today if appropriate steps are taken by the year 2035 cyberpower will be a useful coercive instrument of power This essay explores the reasons why cyberpower is not coercive today and ways it may become more coercive in the future The cyber attacks employed against Estonia and Iran provide evidence cyberpower is currently not coercive as do today s unique cyber attributes Subsequently many experts criticize the coercive ability of cyber tools arguing the ability to quickly deploy countermeasures to a cyber attack imprecise cyber tools and lack of attribution are all reasons why cyber may not be coercive Abstract from web site   Cyber Power: Attack and Defense Lessons from Land, Sea, and Air Power - Estonia and Georgia Cyber Conflicts, Through the Lens of Fundamental Warfighting Concepts Like Initiative, Speed, and Mobility U. S. Military,Department of Defense (DoD),E. Lincoln Bonner III,U. S. Government,2019-01-24 Cyberspace is the newest warfighting domain but heretofore it has been the nearly exclusive purview of technical experts not warfighters Consequently much of the work on cyber power theory has eschewed the traditional concepts and lexicon of war in favor of language more familiar to technical experts in information communications technology This convention stunts strategic thinking on cyber power and creates a barrier to cyber power s integration into joint military operations For these reasons this study advances the beginnings of a cyber

power theory rooted in the lessons of war experience in the traditional warfighting domains of land sea and air By examining cyber power through the lens of fundamental concepts like initiative terrain speed and mobility cyberspace s similarities to the other warfighting domains emerge Cyber power combines qualities inherent to land sea and air power making cyber power simultaneously distinct from and analogous to all three This unique synergy is what separates cyber power from these other forms of military power At the same time similarities between cyberspace and the physical domains lets cyber power theory take lessons from past war experiences as well as from the military theories of those like Carl von Clausewitz Sir Julian Corbett Sir John Slessor and John Boyd By rigorously observing when the analogies between cyberspace and the other domains apply and collapse this study gleans some lessons from traditional experience and theory on how to seize the advantage on attack or defense in cyber power The medium we know today as cyberspace is truly new The medium s beginnings can be traced back to World War II when the first analog computer Colossus was invented to aid the wildly effective Allied code breaking effort against Germany codenamed ULTRA The development of cyberspace was slow but reached critical mass in the 1980s when the Internet a network of networks supplanted the ARPAnet Advanced Research Projects Agency net Since that time the spread of computer networking has become ubiquitous in the developed world and continues to expand worldwide at a breakneck pace with the proliferation of mobile computing smart phones Conflict has already started in cyberspace One of the earliest examples is the American sabotage on a Soviet oil and gas pipeline in the early 1980s A more recent example is the cyber attack on the Iranian nuclear program using the Stuxnet computer virus The Stuxnet virus corrupted the control system for the centrifuges Iran had been using to enrich uranium destroying or disabling the centrifuges in the process Western analysts believe that this cyber attack in conjunction with other measures has delayed Iran s nuclear weapons program until 2015 This delay achieved non kinetically is the best most experts believed the United States or its allies could have attained with an air strike on those same centrifuge facilities Cyber power is the ability to exploit cyberspace to create advantages and influence events As Stuxnet demonstrates cyber power can produce strategic operational and tactical effects on par with the traditional violent means of conflict land sea and air power Yet cyber power theory appears to be lagging the pace of conflict This is not unique to the cyberspace domain Air power was introduced into conflict in World War I WWI but air power theory did not develop significantly until after the war ended when those who participated in or observed the conflict had the opportunity to reflect on those experiences Giuolio Douhet s Command of the Air Brigadier General Billy Mitchell s Winged Defense and Sir John Slessor s Air Power and Armies were all published prior to the start of World War II WWII
