

# Cellular Respiration

How is energy transferred and transformed in living systems?

## Why?

Living organisms display the property of **metabolism**, which is a general term to describe the processes carried out to acquire and use energy. We know that people need to eat, and in our foods are various kinds of nutrients that our cells use. One large group of nutrients in our foods is carbohydrates, which supply our cells with glucose ( $C_6H_{12}O_6$ ). So the question is: How does the food we chew and swallow fuel our cells?

## Model 1 – Glycolysis

1. Refer to Model 1.
  - a. What is represented by the hexagon?  
*Glucose.*
  - b. How many carbon atoms (C) are in one molecule of glucose?  
*Six.*
2. Refer to Model 1.
  - a. What is represented by the triangles?  
*Pyruvic acid.*
  - b. How many carbon atoms (C) are in one molecule of pyruvic acid?  
*Three.*
3. In the process of glycolysis, what happens to glucose after it crosses the cell membrane into the cytoplasm of the cell?  
*Glucose is broken down into pyruvic acid.*

Learn Key AP Biology Concepts in Under an Hour Read on your PC Mac smartphone tablet or Kindle device In AP Biology 21 Must Know Concepts to Ace the Test you ll learn many of the most frequently tested concepts for AP Biology including but not limited to Endosymbiosis the Hardy Weinberg Equation and Mendelian Genetics This book covers not only what these concepts are but why they is important in the context of AP Biology These articles were originally posted on the Learnerator blog and were compiled in no particular order If you feel like you have no idea where to start when it comes to AP Biology prep read this book to begin understanding 21 key concepts for the AP Biology exam Grab your copy today Here is a preview of what is inside this book Introduction Abiogenesis Anaerobic Respiration Animal Behavior Cell Organelles Diffusion Osmosis Dissolved Oxygen DNA Replication Endocrine System Endosymbiosis Enzymes Hardy Weinberg Equation Heredity Immune Systems Kingdoms Krebs Cycle Lipids Mendelian Genetics Mitosis and Meiosis Nucleic Acids Scientific Method Transcription and Translation Conclusion An excerpt from the book Anaerobic respiration is how cells make energy when as you may have guessed from the name there is no available oxygen In fact for this process there is neither oxygen nor mitochondria present The two processes that allow this to work are those of glycolysis and fermentation In cellular respiration what we normally see is glucose breaks down to pyruvate and from this process we net 2 ATP Next the pyruvate will go into the mitochondria and enter the Krebs cycle In the process of being converted to acetyl CoA CO<sub>2</sub> is given off and another 2 ATP are made This energy is stored in NADH and FADH<sub>2</sub> Their electrons move into the electron transport chain which will move to oxygen to transform the product to water In this 23 34 ATP are made Tags ap biology ap bio ap biology review and study guide ap biology exam learnerator      [Chapter Resource 5 Photosynthesis/Cell Response Biology](#) Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2004      *Cellular Respiration* A. Malcolm Campbell, Christopher J. Paradise, 2016-03-28 What happens to a meal after it is eaten Food consists primarily of lipids proteins and carbohydrates sugars How do cells in the body process food once it is eaten and turned it into a form of energy that other cells can use This book examines some of the classic experimental data that revealed how cells break down food to extract the energy Metabolism of food is regulated so that energy extraction increases when needed and slows down when not needed This type of self regulation is all part of the complex web of enzymes that convert food into energy Adding to this complexity is that all food eventually winds up as two carbon bits that are all processed the same way This book will also reveal why animals breathe oxygen and how that relates to the end of the energy extraction process and oxygen s only role in the body Rather than look at all the details this book takes a wider view and shows how cellular respiration is self regulating      **Higher Plant Cell Respiration** Thomas Ap Rees, 1985 I am honored by the editor s invitation to write a Preface for this volume As a member of an older generation of plant physiologists my lineage in plant respiration traces back to F F BLACKMAN through

the privilege of having M THOMAS and W O JAMES two of his students as my mentors How the subject has changed in 40 years In those dark ages B 14C most of the information available was hard won from long term experiments using the input output approach Respiratory changes in response to treatments were measured by laborious gas analysis or by titration of alkali from masses of Pettenkofer tubes the Warburg respirometer was just beginning to be used for plant studies by pioneers such as TURNER and ROBERTSON Nevertheless the classical experiments of BLACKMAN with apples had led to important results on the relations between anaerobic and aerobic carbohydrate utilization and on the climacteric and to the first explicit concept of respiratory control of respiration imposed by the organization resistance of cell structure THOMAS extended this approach in his investigations of the Pasteur effect and the induction of aerobic fermentation by poisons such as cyanide and high concentrations of CO JAMES began a long 2 series of studies of the partial reactions of respiration in extracts from barley and YEMM S detailed analysis of carbohydrate components in relation to respiratory changes added an important new dimension *Photosynthesis and Respiration* John William Marklewitz, 1995 **Cellular Respiration 164**
