CCNA Datacenter DCICN Certification Exam Exam 640-911 ExamFOCUS Study Notes and Review Questions 2013 ExamREVIEW,2013-07-26 The 640 911 DCICN exam covers these topics Describe how

a network worksConfigure verify and troubleshoot a switch with VLANs and interswitch communicationsImplement an IP addressing scheme and IP Services to meet network requirements in a medium size Enterprise branch office

networkConfigure verify and troubleshoot basic router operation and routing on Cisco devicesMost of these topics include material similar to those of the R S track except that the NX OS are also covered since NX OS is being referred to as the data center OS To succeed in this CCNA Datacenter exam you need to read as many reference books as possible There is no single book that can cover everything The book is NOT intended to guide you through every single official topic You should therefore use this book together with other reference books for the best possible preparation outcome This book has information on both the regular IOS and the NX OS The two OSes look similar with some minor differences in the command syntaxes and usage For example NX OS does not have the login command for the switch users Also it does not really distinguish between the standard ACL and the extended ACL After all the exam topics of this Datacenter track do not really have anything special relative to the R S track other than implementing the technical features under the Nexus switches and the NX OS
