has grown out of all the courses given by Dominique Prinet a certified Instructor Evaluator for Sail Canada who has been teaching celestial navigation since 2000 It has benefitted from the thoughtful contributions of over 100 students The aim of Celestial Navigation is to give a sufficient grounding in the subject to determine position at sea using a sextant for fixes on the sun moon stars and planets Furthermore the material presented will prepare a reader who wishes to pursue a Celestial Navigation Certificate through self study The subject requires some comfort with the basic concepts of navigation but the prospective navigator only needs to know how to add and subtract either times or angles Lucid and well paced Celestial Navigation starts with fundamentals and definitions which ensure that a motivated student need not bring anything more to the table than his or her willingness to master the subject Richly illustrated it includes a chapter with more than forty pages of review exercises covering all topics The cleverness of many of the concepts explained here will bring about great intellectual joy and satisfaction Whether you are a recreational sailor or an individual pursuing professional certification as a navigator Celestial Navigation will teach you what you need to know

The Practical Guide to Celestial Navigation Phil Somerville, 2021-10-14 THIS EBOOK EDITION IS DESIGNED TO BE EXPERIENCED ON COLOUR DEVICES The practical guide to celestial navigation know what to do step by step understand why you're doing it and be confident that you can put it into practice when on board Did you know that a person standing on the equator is effectively travelling at 900mph And did you know that you can use this information to work out where you are in the world to an accuracy of about 3 or 4 miles No GPS no computers Just a sextant some tables from an Almanac and the knowledge in this book It's the only back up if the GPS goes down so it's a matter of safety If you want to qualify as a commercial skipper superyacht captain you need to know how to carry out celestial navigation And if you want to pass the RYA Ocean Yachtmaster™ exam you need to know it too It's a major stumbling block for many sailors wanting or needing to take their next qualifications and the other books on the market are complex and often assume some prior understanding This book fulfils the need for a clear explanation of celestial navigation illustrated with colour diagrams and including unique checklist sheets to enable you to repeat all those calculations you learned back at home when you're on deck Without overwhelming the reader with a load of theory from the off the author breaks down what you need to do step by step explaining why at every point giving the information context and making it more interesting and memorable He has trained students in this subject for years and here he's able to use his experiences of what works and what are the common pitfalls he even includes a troubleshooting chapter near the end going through errors commonly made and how to spot them The objective is that readers will finish the book not only knowing what to do but

really understanding why and being able to make sense of it all again later rather than just getting through an exam and finding themselves at a loss when on deck. The author also includes time-tested proformas, quick reference sheets that sailors can refer to when they come to putting the theory into practice on board, avoiding the terrifying cold start that most sailors experience when they suddenly need to put their theoretical knowledge to the test in the real world. **Practical Celestial**

Preface to the Second Edition We are pleased to say that after ten more years of using this text we do not find reason to change the basic approach and methods of the teaching We still use most of the same examples which are now quite old but that is the beauty of celestial navigation It has not changed so we do not benefit in any way from making all new examples which would bring with them more chance of error in a book of many numbers We have however notably improved and expanded the book Each section has been updated and reformatted for a clearer presentation often in response to student questions over the years New graphics have been added and older ones all updated There is much new content in the text especially in the In Depth chapter including more detailed discussion of the sailings and more background on the principles New sections were added on general ocean navigation and optimizing the fixes We have also updated the electronic navigation section as most ocean navigators will also be using other tools besides celestial

Celestial Navigation Jeff Toghil, 1986-06-03 To the

uninitiated celestial navigation appears to be a somewhat frightening exercise in mathematics. In fact the maximum mathematics involved in the new sight reduction systems is the addition of three lines of figures. Similarly the apparent complexities of the solar and stellar systems take on a less frightening appearance when related to the lighthouses and similar earthly objects used for coastal navigation. Throughout this book the author uses such a comparison between earthly and heavenly objects in explaining the close relationship between coastal and celestial navigation. In doing so he reduces a complex subject to a simple and interesting one that can be absorbed by even the most non-mathematically minded. The book concentrates for much of its length on the plotting of the boat's position by sun, planets and stars when out of sight of land. It also deals with related navigational routines such as checking the compass by using heavenly objects, taking radio time signals and adjusting the sextant for day to day corrections. This is celestial navigation in its simplest form presented in a way which even the most amateur navigator can understand and absorb.

Celestial Navigation When Your GPS Fails Mark Breach, 2004. *Celestial Navigation When Your GPS Fails* is about finding position at sea from the Sun, Moon, planets or stars. If you have a sextant and the time in both senses, this book contains all you need to find your position. This book is for real and aspiring bluewater sailors, those who leave the sight of land and rely on various electronic devices for navigation. When satellite navigation fails because of seawater in the electronics or just plain battery failure, then being lost at sea is a life-threatening situation, especially when night falls. Everything you need is here, apart from the sextant and a watch. A calculator is handy but not essential. There is complete instruction on how to use a sextant on making astronomical observations and on how to do the calculations with or without the forms. All tables and the forms needed to make the calculations are available. You do not need any further almanacs or tables for the next ten years. The text explains the celestial framework in which we must operate with particular reference to the way that the Sun, Moon, stars and planets appear and the principles of astronomical navigation. The sextant is described along with its errors and the necessary corrections that need to be applied. Reductions of observations for dip, refraction, semi-diameter of bodies and parallax are covered. With the theory well established, the practicalities of position finding are explained in detail. There is a chapter on the origins of some of the formulae used for those who want a deeper understanding of the mathematics involved, but this may be omitted by those who prefer to focus more on the practice of position finding. The main text concludes with a detailed worked example and blank forms for your own observations of celestial bodies and for the calculation of position. All the tables that you will need are included. All the other tables that you might need, depending on when and where you are going, are on the Celestial Navigation website.

Celestial Navigation Exercises for Class and Home study Dominique F. Prinnet, 2016-01-14. About the Manual: *Celestial Navigation Exercises for Class and Home Study* was designed to facilitate the work of instructors using the free PowerPoint slide presentation available at CelestialNavigationBook.com. This exercise manual, available in hard copy and in PDF format for tablets, reproduces the questions posed at regular intervals throughout the slide presentation. It

provides the work forms guiding the calculations and the solutions Students taking a course from an instructor who follows the slide presentation will normally have the associated course book *Celestial Navigation using the Sight Reduction Tables* Pub No 249 In order to facilitate the download process the free version of the exercise manual available for download from CelestialNavigationBook.com includes neither the Almanac nor the Sight Reduction Tables required for the calculations because these tables are identical to the ones in the course book This complete version of the exercise manual with all the required data tables in the appendix will thus be useful mostly to navigators who do not have the course book but wish to practice on their own as well as to students who follow the presentation and have the course book but do not wish to download and print 140 pages of questions and answers *A Primer of Celestial Navigation* Philip Rose (Writer of A primer of celestial navigation),2006

Celestial Navigation Jack Case, M. A.,2016-07-11 If you are looking for something to enable you to rote learn only what you need to pass an exam without real understanding then sorry this is not the book for you If however you want a book that will not only help you to pass exams but also teach you to navigate and to understand what you are doing then you have come to the right place This unique self teach course comprehensively covers all elements of the examination syllabuses of the main sailing associations Traditional methods of celestial navigation are taught in a way that is easier faster and more accurate than other methods and does not rely on vast tables of data other than the Nautical Almanac Although the prime aim of the course is to teach the practical skills of celestial navigation it is emphasised that without knowledge skill is nothing At the same time it is recognised that students quickly lose interest if they are expected to plough through reams of theory before they can get down to the business of learning the skills With this in mind this course has been uniquely designed to teach the important skills from the outset while tying in the relevant theory as progress is made There are numerous examples and self test exercises which enhance the learning process and help to embed the knowledge and skills needed to practise the art of celestial navigation Although it is a large book containing 324 letter size pages it is thoroughly cross referenced and its layout enables the reader to move from one section to another without having to read it from beginning to end With regard to the mathematical aspects of the subject the author has adopted a language style which allows the text to flow smoothly and makes for enjoyable reading which is a departure from the stilted academic language of many text books Note The terms celestial navigation and astro navigation are generally regarded as synonymous For further information The Astro Navigation Demystified website provides a free resource for all those interested in the subject www.astronavigationdemystified.com
