Calculating X-ray Tube Spectra Gavin Poludniowski, Artur Omar, Pedro Andreo, 2022-05-05 Calculating x ray tube spectra provides a comprehensive review of the modelling of x ray tube emissions with a focus on medical imaging and radiotherapy applications. It begins by covering the relevant background before discussing modelling approaches including both analytical formulations and Monte Carlo simulation. Historical context is provided based on the past century of literature as well as a summary of recent developments and insights. The book finishes with example applications for spectrum models including beam quality prediction and the calculation of dosimetric and image quality metrics. This book will be a valuable resource for postgraduate and advanced undergraduate students studying medical radiation physics in addition to those in teaching, research, industry and healthcare settings whose work involves x ray tubes. Key Features: Covers simple modelling approaches as well as full Monte Carlo simulation of x ray tubes. Bremsstrahlung and characteristic contributions to the spectrum are discussed in detail. Learning is supported by free open source software and an online repository of code. An online repository of the code that accompanies this book can be found here: <https://bitbucket.org/caxtus>

Geotechnical Instrumentation for Monitoring Field Performance goes far beyond a mere summary of the technical literature and manufacturers' brochures. It guides readers through the entire geotechnical instrumentation process, showing them when to monitor safety and performance and how to do it well. This comprehensive guide describes the critical steps of planning monitoring programs using geotechnical instrumentation, including what benefits can be achieved and how construction specifications should be written. Offers detailed practical guidelines on instrument calibrations, installation and maintenance, and on the collection, processing and interpretation of instrumentation data. Describes the role of geotechnical instrumentation during the construction and operation phases of civil engineering projects, including braced excavations, embankments on soft ground, embankment dams, excavated and natural slopes, underground excavations, driving piles and drilled shafts.
