Conceptual Designing Aggregate Structural Applications:

A Conceptual Model for Designing Recycled Aggregate Concrete for Structural Applications Marco

Pepe,2015-12-12 This book reports on the physical and mechanical characterization of Recycled Aggregate Concrete RAC produced through a partial to total replacement of ordinary aggregates with what have been dubbed Recycled Concrete Aggregates RCAs It proposes a theoretical framework for understanding the relationships between RCAs and RCA and for predicting the resulting behavior of RAC The book demonstrates that in the case of RAC two additional parameters have to be taken into account than with ordinary aggregates due to the composite nature and higher porosity of RCAs By extending Abrams Law for Recycled Aggregate Concrete it represents a first step in the formulation of a general model for predicting the properties of RAC The theoretical approach presented here addresses an important gap in the literature and is expected to stimulate new research on the use of this more sustainable form of concrete in structural applications

On Conceptual Modelling M.L. Brodie, J. Mylopoulos, J.W. Schmidt, 1984 The growing demand for systems of ever increasing complexity and precision has stimulated the need for higher level concepts tools and techniques in every area of Computer Science Some of these areas in particular Artificial Intelligence Databases and Programming Languages are attempting to meet this demand by defining a new more abstract level of system description We call this new level conceptual in recognition of its basic conceptual nature In Artificial Intelligence the problem of designing an expert system is seen primarily as a problem of building a knowledge base that represents knowledge about an enterprise Consequently Knowledge Representation is viewed as a central issue in Artificial Intelligence research Database design methodologies developed during the last five years are almost unanimous in offering semantic data models in terms of which the designer directly and naturally models an enterprise before proceeding to a detailed logical and physical database design In Programming Languages different forms of abstraction which allow implementation independent specifications of data functions and control have been a major research theme for a decade To emphasize the common goals of these three research efforts we call this new activity conceptual modelling
