**Guidance of Head and Neck Surgery** Nathaniel M. Hamming, 2009 Modern image guided surgery aids minimally invasive high precision procedures that increase efficacy of treatment This thesis investigates two research aims to improve precision and integration of intraoperative cone beam CT CBCT imaging in guidance of head and neck H N surgery First marker configurations were examined to identify arrangements that minimize target registration error TRE Best arrangements minimized the distance between the configuration centroid and surgical target while maximizing marker separation Configurations of few markers could minimized TRE with more markers providing improved uniformity Second an algorithm for automatic registration of image and world reference frames was pursued to streamline integration of CBCT with real time tracking and provide automatic updates per scan Markers visible to the tracking and imaging systems are automatically co localized and registered with equivalent accuracy and superior reproducibility compared to conventional registration Such work helps the implementation of CBCT in H N surgery to maximize surgical precision and exploit intraoperative image guidance

**Sectional Anatomy of the Head and Neck** John H. Lillie, Brent A. Bauer, 1994 This superb atlas of the sectional anatomy of the head and neck exclusive of the CNS is presented in two complementary planes coronal and horizontal Sixty four exceptional pen and ink illustrations accurately capture the fine detail of 3mm thick sections through the region Every detail was exactly transferred from photographs of the section and its identification was confirmed by microdissection of the exposed surface These pen and ink images have been reproduced at natural size in labeled and unlabeled pairs an approach that allows the complete identification of structures without masking critical anatomical detail The captions that accompany each set of illustrations provide brief authoritative information about the section and how it relates to adjacent tissues Difficult concepts such as regional compartments and facial spaces are clearly explained reflecting the broad experience of the senior author in teaching the basic as well as the applied clinical anatomy of the head and neck Twenty two sections have
