The Effects of Core Stability Training on Balance in Collegiate NCAA Division I Ice Hockey Players Casie D. Hanson, 2011 The purpose of this study was to determine if a nine week core stability training program along with normal workouts improved core stability and balance for NCAA Division I female ice hockey players The study consisted of a training program which took 15 minutes two times a week for nine weeks The McGill Core Stability Test consisting of four tests TF TE RL and LL was used to assess core stability The tests consisted of four different positions held to maximum time The Star Excursion Balance Test SEBT was used to evaluate balance All subjects balanced on one skate and reached to eight lines AT AM MD PM PT PL LT and AL with the other skate while maintaining balance Pre and post test results for the McGill Core Stability Tests and the SEBT were analyzed using dependent t tests The study revealed core stability and balance improved during the nine week core stability training program However no significant correlation was found between core stability and balance indicating other variables increased ice time and timing of the study may have influenced the results In conclusion significant gains in core stability and balance after the nine weeks were found but without a significant correlation between the two variables the core stability training program may not have been the complete reason for the gains shown in the study Abstract
