

### Fuel tank filter hoses - removal and refitting

The fuel tank filter hoses in the engine are the same as the carburettor filter hoses. Removal and refitting is described in Chapter 4A.

### Fuel tank - removal and refitting

The fuel tank and fittings and similar to the carburettor filter hoses. Removal and refitting is described in Chapter 4A, but there is a fuel return tube that needs to be disconnected. Make this fuel tank return tube loose for identification purposes, as they are not traced up.

### Fuel system - priming and bleeding

**Warning:** Diesel injection pumps operate best at very high pressure. Exercise care around the fuel tank when working on the fuel injection pump. Fuel is unlikely to follow an unbroken circuit around the system before reaching a fuel line. Never bypass the pump. There are two parts of the body of the injection pump: the high-pressure delivery section and the low-pressure return section. Both sections contain fuel under high pressure. Fuel is delivered to the engine via the high-pressure section.

When disconnecting part of the fuel supply or turning out of fuel, it is necessary to bleed the system and bleed off air, as may never exhaust the system. Fuel lines are fitted with a fuel filter/separator. Some models use a fuel filter/separator. The filter/separator is integrated with the fuel pump and the high-pressure lines may be the filter/separator or filter/separator and the plunger is integrated. Fuel is fed into the pump and any air is fed through the fuel pump outlet and to the filter. Later models, from 1986 onwards, are fitted with a filter/separator of a similar pattern and the fuel flow is measured on the return line. There is an automatic pump bleeding air from the high-pressure circuit and return. A bleed valve is fitted to pass through the filter/separator.

### Priming the fuel system

Many models have a bleed valve on the filter/separator that can be opened and closed and automatically primed. Open the bleed valve and

place a rag around it, then operate the plunger fuel feed, from front to, as normal. Then tighten the bleed valve and repeat any fuel feed. Prime the low-pressure circuit as described earlier.

### Priming the low-pressure circuit

8.2b Fuel filter and pressure pump - up to Petrolux 1000

8.2c Fuel filter and pressure pump - up to Petrolux 1000

A. Start the fuel injection pump, turn on the fuel filter/separator to bypass and prime the delivery section (high-pressure side). If the engine has run out of fuel, pour at least two litres of fuel into the tank, with the engine running.

B. Operate the pump plunger or bypass line priming bulb until a continuous hissing noise is heard.

C. Make sure the pre-heater warning light has gone out.

D. Depress the bypass line plunger to bypass the filter/separator and start the engine. If the engine does not start at the first attempt, wait 10 seconds and try again. If it still doesn't start, operate the plunger or priming bulb again. Then make another attempt to start the engine. When the engine starts, accelerate slightly to boost priming the fuel circuit.

### Bleeding the high-pressure circuit

E. If the engine will not start after thoroughly priming the low-pressure circuit, it is likely that air has entered the high-pressure circuit. Disconnect the fuel pump, bypass the injection pump, place a bulb of rag around the plunger section, turn the fuel pump to the fuel tank section, then connect. Return to the fuel tank section, then connect. Make the fuel tank section, then connect.

8.2d Fuel filter - Petrolux 1000 onwards

Priming of the plenum chamber. Check that engine oil has started to emerge from the oil dipstick, prime the engine, then start the engine and tighten the unions. Make no air in the fuel tank.

E. Start the engine with the accelerator pedal fully depressed. Accelerator depression may be necessary to easily prime the system before the engine starts.

### 10 Maximum engine speed - checking and adjustment

**Caution:** On most diesel injection pumps the maximum rated setting is marked by the manufacturer and the factory and locking nuts and a lock washer. Do not adjust the valve of the engine in this position, the maximum rated performance may be exceeded with the plenum.

**Notes:** This adjustment requires the use of a tachometer. The use of tools such as a tachometer that would affect engine dynamics (such as a load or other engine) or TDC aligner would be considered. The use of such tools can reduce engine performance and fuel economy. If you cannot access the correct equipment, take the vehicle to a garage dealer or other specialist.

### Checking

F. Run the engine to normal operating temperature.
