Developmental Psychobiology An Interdisciplinary Science:

Developmental Psychobiology George F. Michel, Celia L. Moore, 1995 This text is the first to provide a coherent theoretical treatment of the flourishing new field of developmental psychobiology which has arisen in recent years on the crest of exciting advances in evolutionary biology developmental neuroscience and dynamic systems theory Michel and Moore two of the field's key pioneers and researchers integrate primary source information from research in both biological and psychological disciplines in a clear account of the frontier of biopsychological investigation and theorizing Explicitly conceptual and historical the first three chapters set the stage for a clear understanding of the field and its research with particular attention to the nature nurture question The next three chapters each provide information about a basic subfield in biology genetics evolution embryology that is particularly relevant for developmental studies of behavior These are followed by extended treatments of three spheres of inquiry behavioral embryology cognitive neuroscience animal behavior in terms of how a successful interdisciplinary approach to behavioral development might look A final chapter comments on some of the unique aspects of development study From this detailed and clearly organized text students will achieve a firm grasp of some of science's most fertile questions about the relation between evolution and development the relation between brain and cognitive development the value of a natural history approach to animal behavior and what it teaches us about humans and much more Each chapter contains material that questions the conventional wisdom held in many subdisciplines of biology and psychology Throughout the text challenges students to think creatively as it thoroughly grounds them in the field's approach to such topics as behavioral genetic analysis the concept of innateness molecular genetics and development neuroembryology behavioral embryology maturation cognition and ethology A Bradford Book Fundamentals of Developmental Psychobiology Professor Emeritus of Psychology George F Michel, 2026-04 This book provides the reader with a solid understanding of how physiological biomechanical and experiential processes are united in the organization of the developmental trajectories that create behavioral and psychological abilities and traits *DEVELOPMENTAL PSYCHOBIOLOGY* George F. In light of scientific advances such as genomics predictive diagnostics genetically engineered agriculture nuclear transfer cloning and the manipulation of stem cells the idea that genes carry predetermined molecular programs or blueprints is pervasive Yet new scientific discoveries such as rna transcripts of single genes that can lead to the production of different compounds from the same pieces of dna challenge the concept of the gene alone as the dominant factor in biological development Increasingly aware of the tension between certain empirical results and interpretations of those results based on the orthodox view of genetic determinism a growing number of scientists urge a rethinking of what a gene is and how it works In this collection a group of internationally renowned scientists present some prominent alternative approaches to understanding the role of dna in the construction and function of biological organisms Contributors discuss alternatives to the programmatic view of dna including the developmental systems approach methodical culturalism the molecular process concept of the gene the hermeneutic theory of description and process structuralist biology None of the approaches cast doubt on the notion that dna is tremendously important to biological life on earth rather contributors examine different ideas of how dna should be represented evaluated and explained Just as ideas about genetic codes have reached far beyond the realm of science the reconceptualizations of genetic theory in this volume have broad implications for ethics philosophy and the social sciences Contributors Thomas B rglin Brian C Goodwin James Griesemer Paul Griffiths Jesper Hoffmeyer Evelyn Fox Keller Gerd B M ller Eva M Neumann Held Stuart A Newman Susan Oyama Christoph Rehmann Sutter Sahotra Sarkar Jackie Leach Scully Gerry Webster Ulrich Wolf Encyclopedia of Human Ecology: I-Z Julia R. Haraway, 2002 This textbook presents a unified theoretical perspective of comparative psychology presenting the traditional principles of the field combined with the strength of current empirical research Drawing on a rich historical tradition Principles of Comparative Psychology looks to the future of the discipline in the 21st century The authors have conceived this field broadly as the study of origins of all behavior while utilizing a developmental perspective in which behavior is understood to be the result of a fusion of biological and psychosocial factors Particular recognition is given to some of the unique problems of the discipline in carrying out a careful application of the scientific method to its chosen subject matter of mind and behavior
