Luthar, 1997-02-28. This volume provides a forum for interdisciplinary perspectives in the emerging discipline of developmental psychopathology. The goal is to elucidate the four central principles of this discipline: the application of classical developmental theory in work with atypical populations; the delineation of insights from atypical populations that inform developmental theory; the integration of methods and theories from various social science disciplines; and the description of implications for interventions and social policy. So far there have been few efforts to present each of these principles of developmental psychopathology within a single unifying framework. Illustrating these central principles across a range of state of the art research programs, this unique collection of papers will be invaluable for students, current researchers and clinicians seeking a sound understanding of this rapidly emerging social science discipline.
