Transparent Designs Michael L. Black,2022-03-29 This fascinating cultural history of the personal computer explains how user friendly design allows tech companies to build systems that we cannot understand Modern personal computers are easy to use and their welcoming user friendly interfaces encourage us to see them as designed for our individual benefit Rarely however do these interfaces invite us to consider how our individual uses support the broader political and economic strategies of their designers In Transparent Designs Michael L Black revisits early debates from hobbyist newsletters computing magazines user manuals and advertisements about how personal computers could be seen as usable and useful by the average person Black examines how early personal computers from the Tandy TRS 80 and Commodore PET to the IBM PC and Apple Macintosh were marketed to an American public that was high on the bold promises of the computing revolution but also skeptical about their ability to participate in it Through this careful archival study he shows how many of the foundational principles of usability theory were shaped through disagreements over the languages and business strategies developed in response to this skepticism In short this book asks us to consider the consequences of a

computational culture that is based on the assumption that the average person does not need to know anything about the internal operations of the computers we've come to depend on for everything. Expanding our definition of usability, *Transparent Designs* examines how popular and technical rhetoric shapes user expectations about what counts as usable and useful as much as or even more so than hardware and software interfaces. Offering a fresh look at the first decade of personal computing, *Black* highlights how the concept of usability has been leveraged historically to smooth over conflicts between the rhetoric of computing and its material experience. Readers interested in vintage computing, the history of technology, digital rhetoric, or American culture will be fascinated in this book. *Computer Lib* Theodor H. Nelson, 1980 **The Net Effect** Thomas Streeter, 2011 This book about America's romance with computer communication looks at the Internet not as a harbinger of the future or the next big thing but as an expression of the times. Streeter demonstrates that our ideas about what connected computers are for have been in constant flux since their invention. In the 1950s they were imagined as the means for fighting nuclear wars; in the 1960s as systems for bringing mathematical certainty to the messy complexity of social life; in the 1970s as countercultural playgrounds; in the 1980s as an icon for what's good about free markets; in the 1990s as a new frontier to be conquered; and by the late 1990s as the transcendence of markets in an anarchist open source utopia. *The Net Effect* teases out how culture has influenced the construction of the internet and how the structure of the internet has played a role in cultures of social and political thought. *The New Media Reader* Noah Wardrip-Fruin, Nick Montfort, 2003-02-14 A sourcebook of historical written texts, video documentation, and working programs that form the foundation of new media. This reader collects the texts, videos, and computer programs, many of them now almost impossible to find, that chronicle the history and form the foundation of the still emerging field of new media. General introductions by Janet Murray and Lev Manovich, along with short introductions to each of the texts, place the works in their historical context and explain their significance. The texts were originally published between World War II, when digital computing, cybernetic feedback, and early notions of hypertext and the Internet first appeared, and the emergence of the World Wide Web, when they entered the mainstream of public life. The texts are by computer scientists, artists, architects, literary writers, interface designers, cultural critics, and individuals working across disciplines. The contributors include chronologically: Jorge Luis Borges, Vannevar Bush, Alan Turing, Ivan Sutherland, William S. Burroughs, Ted Nelson, Italo Calvino, Marshall McLuhan, Jean Baudrillard, Nicholas Negroponte, Alan Kay, Bill Viola, Sherry Turkle, Richard Stallman, Brenda Laurel, Langdon Winner, Robert Coover, and Tim Berners Lee. The CD accompanying the book contains examples of early games, digital art, independent literary efforts, software created at universities and home computer, commercial software. Also on the CD is digitized video documenting new media programs and artwork for which no operational version exists. One example is a video record of Douglas Engelbart's first presentation of the mouse, word processor, hyperlink, computer-supported cooperative work, video conferencing, and the dividing up of the screen we now call non-overlapping windows; another is

documentation of Lynn Hershman's Lorna the first interactive video art installation *Microtimes*, 1988 **The Compleat Computer** Dennie Van Tassel, Cynthia L. Van Tassel, 1983 *Cabinet*, 2004 *BASIC for Home Computers* Robert L. Albrecht, Bob Albrecht, LeRoy Finkel, Jerald R. Brown, 1978-09 Teaches how to read, write and understand the programming language BASIC used in the new personal size microcomputer. Includes applications and games for the hobbyist or for anyone who wants to use these small computers in home, school or office. No special background required. And access to a computer is unnecessary. *Science for the People*, 1978 **America in the Seventies** Beth L. Bailey, 2004 The seventies witnessed economic decline in America coupled with a series of foreign policy failures. Events that created an air of unease and uncertainty. This volume examines the ways in which Americans responded to a changing world and sought to redefine themselves. **Booklegger Magazine**, 1975
