Early Experience and Human Development Theodore D. Wachs, Gerald E. Gruen, 2012-12-06 Our goal in writing this book was to fill a perceived gap in the early experience literature Most existing volumes on early experience and development can be dichotomized on a basic versus an applied dimension Volumes falling on the basic side are designed for researchers and theoreticians in the biomedical and behavioral sciences Most existing basic volumes are either primarily based on infrahuman data or are based on single major human studies In going over these volumes we are not convinced of the generality of infrahuman data to the human level in addition we were concerned about the replicability of findings from single studies however well designed these studies were As a result the relevance of data from these volumes to applied human problems is quite limited In contrast volumes falling on the applied side are designed primarily for those involved in intervention work with infants and young children These applied books generally tend to be vague and nonempirical compilations of the views of experts and the collective wisdom of the ages Rarely in applied volumes do we find conclusions based on solid consistent empirical findings

optimal development Evolution Early Experience and Human Development asserts that human development is being misshaped by government policies social practices and public beliefs that fail to consider basic human needs In this pioneering volume scientists from a range of disciplines theorize that the increase in conditions such as depression and obesity can be partially attributed to a disparity between the environments and conditions under which our mammalian brains currently develop and our evolutionary heritage For example healthy brain and emotional development depends to a significant extent upon caregiver availability and quality of care These include practices such as breastfeeding co sleeping and parental social support which have waned in modern society but nevertheless may be integral to healthy development As the authors argue without a more informed appreciation of the ideal conditions under which human brains minds develop and function human beings will continue to struggle with suboptimal mental and physical health and as problems emerge psychological treatments alone will not be effective The best approach is to recognize these needs at the outset so as to optimize child development Evolution Early Experience and Human Development puts forth a logical empirically based argument regarding human mammalian needs for optimal development based on research from anthropology neurobiology animal science and human development The result is a unique exploration of evolutionary approaches to human behavior that will support the advancement of new policies new attitudes towards health and alterations in childcare practices that will better promote healthy human development
