Towards HRI of Everyday Life

Karolina Zawieska, Mohammad Obaid, Wafa Johal, Jessica Sorenson, Catharina Vesterager Smedegaard, Glenda

Hannibal, 2025-10-03 Presently it is often assumed that at least in principle robots and social robots in particular have the potential to increase human well being across a wide range of sectors and application areas At the same time efforts to introduce such systems into our everyday environments have had only limited success and it is yet to be seen whether the impact of social robots on our daily lives professional and private will actually be beneficial Therefore there is a need to systematically address and study the long term use and presence of social robots in everyday environments where humans not only interact with robots but also have them integrated into the totality of their lived experiences in everyday life One of the main ways to investigate human engagement with social robots in everyday environments is through HRI studies conducted in the wild While such an approach has certainly been instrumental to and is increasingly used in HRI research we propose here to further expand the underlying theoretical and methodological frameworks to address the notion of everyday life The latter is viewed here as a useful concept and an umbrella term that allows us to address not only specific application domains for robots but also the continuity and totality of human lived experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in everyday settings has often been an explicit goal for robot development however the notion of everyday life has yet to be systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of disciplinary and interdisciplinary contributions to further develop the HRI domain

The Dynamic Structure of Everyday Life Philip Agre, Massachusetts Institute of Technology, Artificial Intelligence Laboratory, 1988 A running argument means continually redeciding what to do Continually redeciding what to do is more flexible than executing a plan because it is more responsive to opportunities and contingencies It is possible to approximate the ideal of continual redecision because life is wholly a routine The routine portion of the reasoning leading to each moment's action can be implemented very efficiently by recording the reasons behind any novel bits of reasoning a method known as dependency maintenance A computer program called the running argument illustrates this point

Science Fiction as Legal Imaginary Alex Green, Mitchell Travis, Kieran Tranter, 2024-11-21 This book examines how science fiction informs the legal imagination of technological futures Science fiction the contributors to this book argue is a storehouse of images tropes concepts and memes that inform the legal imagination of the future and in doing so generate impetus for change Specifically the contributors examine how science fictions imagine human life in space in the digital and

as formed and negotiated by corporations They then connect this imaginary to how law should be understood in the present and changed for the future Across the chapters there is an urgent sense of the need for law as it is has been and as it might become to order and safeguard the future for a multiplicity of vulnerable entities This book will appeal to scholars and students with interests in law and technology legal theory cultural legal studies and law and the humanities Motor World for Jobbers, Dealers and Garagemen ,1923 AI Magazine ,2004 **Visions of Artificial Intelligence** Stefan
