Operations of Commercial Tilt Rotor Aircraft Henry B. Faulkner,1976 The relationship between direct operating cost DOC
and noise annoyance due to a departure and an arrival operation was developed for commercial tilt rotor aircraft This was
accomplished by generating a series of tilt rotor aircraft designs to meet various noise goals at minimum DOC These vehicles
ranged across the spectrum of possible noise levels from completely unconstrained to the quietest vehicles that could be
designed within the study ground rules Optimization parameters were varied to find the minimum DOC This basic variation
was then extended to different aircraft sizes and technology time frames It was concluded that reducing noise annoyance by
designing for lower rotor tip speeds is a very promising avenue for future research and development It appears that the cost
of halving the annoyance compared to an unconstrained design is insignificant and the cost of halving the annoyance again is
