Kurobane, J. A. Packer, J. Wardenier, N. Yeomans, 2004 Design Guide for Hollow Structural Section Connections J. A. Packer, J. E. Henderson, Canadian Institute of Steel Construction, 1992 Design Guide for Structural Hollow Section Columns Exposed to Fire, 1996 **Design Guide for Structural Hollow Sections Columns Exposed to Fire** L. Twilt, R. Haas, W. Klingsch, 2003 Design Guide for Structural Hollow Section Columns Exposed to Fire L. Twilt, 1994-01 This design guide the fourth in the CIDECT series Construction with hollow steel sections deals with the fire protection of hollow steel section columns exposed to fire One of the major advantages of hollow section columns is to make fire protection possible by using methods other than the classic addition of materials on the external surface namely by water or concrete filling Not only the water cooled or concrete filled columns require markedly less space thus giving an appreciable increase in the usable volume but also they add to the slim and aesthetic appearance of the construction All three fire protection methods external protection by plaster asbestos or vermiculite as well as intumescent paints and coatings cooling by water static or circulating and concrete filling have been described in this book with design examples to make them easy to be applied by the user Back cover **Design Guide for Rectangular Hollow Section (RHS) Joints Under Predominantly Static Loading**, 2009 Design Guide for Circular Hollow Section (CHS) Joints Under Predominantly Static Loading, 2008 **Design Guide for Circular Hollow Section (chs) Joint Under Predominantly Static Loading** J. Wardenier, Y. Kurobane, J. A. Packer, 2003 *Design Guide for Rectangular Hollow Section (RHS) Joints Under Predominantly Static Loading* Jeffrey A. Packer, 1992 This design guide deals with the static strength criteria for various uniplanar and multiplanar welded and bolted connections of square and rectangular hollow sections with emphasis on the connection behaviour and governing connection parameters Tubular Structures IX Puthli, 2001-01-01 A reference for architects and engineers this work covers themes on architecture case studies and the application and strengths of tubular beams **Steel Designers' Handbook** Branko Gorenc, Ronald Tinyou, Arun Syam, 2005 This book makes extensive use of worked numerical examples to demonstrate the methods of calculating the capacities of structural elements These examples have been extensively revised from the previous edition with further examples added The worked examples are cross referenced to the relevant clauses in AS 4100 1998 BOOK JACKET **Design Guide for Structural Hollow Section Columns Exposed to Fire** Twilt, Hass, Klingsch, *Contribution on the behavior of welded joints to metallic structural elements with tubular section* Dr.-Ing. Patrick Heinemann, 2023-02-22 Doctoral Thesis Dissertation from the year 2022 in the subject Engineering Civil Engineering grade Summa cum laude language English abstract Steel structures which are made

of hollow section profiles are mainly used for construction structures. There are many fields of applications for structures made of hollow section profiles. Hollow section profiles are lightweight and have got a high resistance to compression which is an advantage for column structures. The most common profile types have squared or circular hollow cross sections. Connecting two or more pipes by welding the joints have got different shapes. These joints are part of trusses or columns with a tree shaped optic. The standards have got restrictions regarding the geometry material or load cases. By choosing a node which is excluded in the standards designing engineers have to create their own models. This thesis is about the designing of a Y shaped steel joint full overlapped on top connection which is not defined in current standards up to the time the thesis is created. In this thesis only uniplanar joints are investigated. A special focus is on the welding line which has got a three dimensional shape. The aim is to figure out the influence on the inclination angle between the two members on the resistance of the joint. Beside this the profile shape and profile thickness vary to see the differences in their resistance. Square and circular hollow section profiles are in focus. To analyse the behaviour of the different steel joints a numerical and experimental investigation is executed. Design charts are created as a medium for designing engineers to calculate the ultimate resistance in the elastic and plastic state depending on the steel profile thickness and inclination angle. The structure of the thesis is split into four main parts. Firstly there is an explanation of the general topic with its difficultness. Secondly there is the state of the art presentation of literature and standards in this range. Thirdly there is a numerical analysis of the joints. The basement of the numerical studies is detailed in pre studies which explain and compare different mesh types or geometrical variations. Fourthly there is an experimental verification of the numerical tests. It is figured out if the inclination angle increase the resistance of the steel joint will decrease significantly. This effect is non linear. Beside this it is found that the full overlapped joint with the squared profile has got a higher resistance than a comparable joint with a similar circular hollow section.

Tubular Structures XI Jeffrey A. Packer, 2017-10-02. This topical book contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 11th International Symposium and IIW International Conference on Tubular Structures. The International Symposium on Tubular Structures (ISTS) has a long standing reputation for being the principal showcase for manufactured tubing and the prime international forum for discussion of research developments and applications in this field. Various key and emerging subjects in the field of hollow structural sections are covered such as novel applications and case studies, static and fatigue behaviour of connections, joints, concrete filled and composite tubular members, earthquake resistance, specification and code developments, material properties and structural reliability, impact resistance and brittle fracture, fire resistance, casting and fabrication innovations. Research and development issues presented in this book are applicable to buildings, bridges, offshore structures, entertainment rides, cranes, towers and various mechanical and agricultural equipment. This book is thus a pertinent reference source for architects, civil and mechanical engineers, designers, steel fabricators and contractors, manufacturers of

hollow sections or related construction products trade associations involved with tubing owners or developers of tubular structures steel specification committees academics and research students The conference presentations herein include two keynote lectures the International Institute of Welding Houdremont Lecture and the ISTS Kurobane Lecture plus finalists in the CIDECT Student Papers Competition The 11th International Symposium and IIW International Conference on Tubular Structures ISTS11 took place in Quebec City Canada from August 31 to September 2 2006 *Tubular Structures X M A Jaurietta, Jose A Chica, Angel Alonso, 2017-10-02* This volume contains the Kurobane lecture and proceedings of the Tenth International Symposium on Tubular Structures ISTS10 held in Madrid Spain 18-20 September 2003 The ISTS10 provides a platform for the presentation and discussion of seventy three lectures covering themes including bridges roofs design aspects and case studies static joint behaviour fatigue members beam column connections finite element methods concrete filled tubes trusses and frames cast nodes and behaviour of tubular structures under fire This book provides a useful reference work for architects civil and mechanical engineers designers manufacturers and contractors involved with tubular structures

Design Guide for Circular and Rectangular Hollow Section Welded Joints Under Fatigue Loading Xiao-Ling Zhao, 2001 **Designers' Guide to EN 1993-1-1** Leroy Gardner, D. A. Nethercot, 2005 After some 25 years in preparation the key parts of EN 1993-1-1 Eurocode 3 Design of steel structures General rules and rules for buildings have now been finalised Eurocode 3 covers many forms of steel construction and provides the most comprehensive and up to date set of design guidance currently available Throughout this book concentrates on the most commonly encountered aspects of structural steel design with an emphasis on the situation in buildings Much of its content is therefore devoted to the provisions of the Part 1-1 General rules and rules for buildings of EN 1993 This is however supplemented by material on loading joints and cold formed design For each of the principal aspects covered the book provides background to the structural behaviour explanation of the codified treatment including departure from existing practice BS 5950 and numerous worked examples This Guide should serve as the primary point of reference for designing steel structures to Eurocode 3
