After more than two decades of painstaking fundamental research, the concept of therapeutic cells, stem cells, genes etc beyond the concept of vaccines is reaching clinical trial with mounting confidence in the safety and efficacy of these products. Nonetheless, numerous incremental technical advances remain to be achieved. Thus, this volume highlights the possible R&D paths which will ultimately facilitate clinical delivery of cutting edge curative products. The next waves of innovation are reviewed in depth for hematopoietic stem cells, mesenchymal stem cells, tissue engineering, CAR T cells and cells of the immune system, as well as for enabling technologies such as gene and genome editing. Additionally, deep dives in product fundamentals, history of science, pathobiology of diseases, scientific and technological bases and financing and technology adoption constraints are taken to unravel what will shape the cytotherapy industry to the horizon 2025 and beyond. The outcome is not simply a scientific book but a global perspective on the nascent field combining science, business and strategic fundamentals. Helps readers learn about the most current trends in cell based therapy, their overall effectiveness from a clinical prospective and how the industry is moving therapies forward for capitalization. Perspectives section at the end of each chapter summarizes key learnings, hypotheses and objectives highlighted and combines scientific and business insights. Edited and authored by scientists representing both basic and clinical research and industry, presenting a complete story of the current state and future promise of cellular therapies.
