

## Monitoring

**Figure 3.1 Pulmonary Artery Catheter**

**Table 3.2 Indications for Pulmonary Artery Catheter Monitoring**

**Patients with**

- Recent myocardial infarctions or unstable angina
- Poor LV function (congestive heart failure)
- Hypovolemic, cardiogenic, or septic shock, or with multiple organ failure
- Right heart failure, COPD, pulmonary hypertension, or pulmonary embolism
- High levels of positive end-expiratory pressure
- Hemodynamically unstable patients requiring inotropes or IABP
- Massive ascites requiring major surgery

**Major procedures**

- Involving large fluid shifts and/or blood loss in patients with CAD
- Requiring cardiopulmonary bypass (CPB)
- Massive trauma cases
- Surgery requiring aortic cross-clamping
- Hepatic transplantation

clinical studies are inconclusive. Many studies looking at the influence of use of a PAC on outcome are confounded by the fact that in many cases sicker patients are more likely to have a PAC. Like any monitor its effect on outcome is based on the ability of the physician to interpret its results and institute appropriate management. Many physicians believe that the misinterpretation of acquired data potentially could lead to diagnostic and therapeutic errors, adversely affecting patient outcome.
