Grade 9 - D

CIRCULATORY SYSTEM

I. Identify the parts of the human heart.

1. __superior vena cava__
2. __right pulmonary artery__
3. __right pulmonary veins__
4. __pulmonary valve__
5. __right atrium__
6. __tricuspid valve__
7. __right ventricle__
8. __inferior vena cava__
9. __arteries__
10. __aorta__
11. __left pulmonary artery__
12. __left pulmonary veins__
13. __left atrium__
14. __bicuspid valve__
15. __aortic valve__
16. __left ventricle__
17. __interventricular septum__

II. Complete the following scheme of blood circulation in the human body.

Oxygen-poor blood enters the right atrium through the tricuspid valve to the right ventricle. Through the pulmonary valve, blood is pumped to the pulmonary trunk then to the left pulmonary artery reaching capillary beds of the lungs. From the lungs, oxygen rich blood goes and enters to the pulmonary veins to the left atrium of the heart then through the bicuspid valve to the chamber called left ventricle. Oxygen rich blood will exit the heart through the aortic valve to the largest artery called aorta. Blood will reach the systemic arteries to the capillaries of the tissues to the systemic veins to the superior vena cava and inferior vena cava returning to the right atrium of the heart.

III. Identify the different types of blood vessels in the picture.

Cardiovascular System Answers

Marianne P. Barba, Sandra F. Smith

Cardiovascular System Answers:

101 Questions about Blood and Circulation, 2nd Edition Faith Hickman Brynie, 2013-01-01 As in previous books in this critically acclaimed series Brynie polled hundreds of high school students across the country to find out what they wanted to know most about blood and circulation Using an accessible question and answer format Brynie helps readers discover and learn facts about the blood and circulation in human body Brynie appealing and clear writing style makes learning about blood and circulation as easy as donating blood to the blood bank

Cardiovascular System: Questions and Answers: An Aid for Learners Urban John Arnold D'Souza, Mohd Firdaus bin Mohd Hayati, Firrul bin Masnah @ Kadir, Nornazirah binti Azizan, Vishnudas Prabhu, 2021-08-19 This short book focuses on the possible examination questions and their answers on the cardiovascular system In the era of modern technology and the internet of things student learning has gone beyond the approved textbooks and teachers due to the overload of information that is easily available on the internet using different search engines The trend and fashion are so deep rooted to the extent that the Google search engine is the Bible for everyone These days students do a common mistake of going through information overload and assuming the information available on the web as knowledge It is very well true for medical students information overload confuses the mind and focus of study This book aids a learner of the cardiovascular system to know the appropriate depth of knowledge that one needs to know In the evaluation based academic assessment student knowledge is measured by different methods of assessment tools such as written examinations such as long essay short essay viva voce etc This book provides comprehensive and concise knowledge based on a question so that a student develops an awareness that helps to frame the answer required for a question

Anatomy and Physiology : The Cardiovascular System Rumi Michael Leigh, The Cardiovascular System Things You Should Know Questions and Answers explains the anatomy physiology and conditions of the cardiovascular system in a question and answer format The book introduces the heart blood and blood vessels describing how the system functions as a closed circuit to circulate blood It explains systole diastole cardiac output and the phases of the cardiac cycle The roles of arteries veins and capillaries are outlined along with how valves pressure differences and muscle activity regulate blood flow Key topics include the composition of blood the function of erythrocytes leukocytes and thrombocytes and the importance of plasma in transporting nutrients and gases The text also covers electrocardiograms hemostasis erythropoiesis and the role of hormones in blood pressure regulation Common cardiovascular conditions are explained such as anemia arrhythmia hypovolemia myocarditis endocarditis hypertension atherosclerosis and angina pectoris This book will interest students health science learners and those studying anatomy and physiology who want to understand the cardiovascular system its functions and related disorders

The Cardiovascular System Alan Noble, 2005 A textbook on the cardiovascular system for medical students offering an integrated coverage of the basic science and major diseases of the system Integrated coverage of the structure function and major diseases of the cardiovascular system highly suitable for systems courses as

taught in the new medical curriculum Coverage of the basic science is clinically driven a common clinical presentation introduces each major topic Clinical cases are used and explained in the chapter rather than merely being present to provide additional interest Coverage of major diseases of the cardiovascular system equips students for the contact with patients which now occurs much earlier in the medical course Attractive open two colour page design with objectives defined at the start of each chapter and self assessment at the end

Court of Appeal (2nd Appellate District). Records and Briefs** California (State)., Cardiovascular System Dynamics Jan Baan,Abraham Noordergraaf,Jeff Raines,1978 This book offers a novel approach to the study of the mammalian cardiovascular system Instead of focusing on a particular part of the system or on a particular group of techniques or approaching the system from a particular point of view it stresses a balanced presentation of ideas all the major component parts of the system are discussed as well as the behavior of the system as an integrated whole both basic and clinical viewpoints are represented both detailed analysis and comprehensive synthesis are offered In addition trends in modern instrumentation and the use of computers in improving patient care are important and recurrent themes Spirited discussions of current controversies and philosophies highlight the presentations The 62 papers in this volume were invited for a major international conference held in April 1975 which marked the coming of age of this field and led to the founding of the Cardiovascular System Dynamics Society The conference brought together outstanding researchers in the life sciences biology physiology medicine and the physical sciences biophysics bioengineering in order to integrate their findings more intricately and to chart the present state and future directions of the field Since the cardiovascular system has been one of the first areas to receive attention under the newly emerging symbiosis between engineering and medicine the book also serves a useful secondary purpose as a model of what can be accomplished by such integrated effort The papers are organized into 12 sections The first 9 offer a tour of the cardiovascular system with papers arranged within each section to lead the reader from theoretical to clinical viewpoints Included are sections on cardiac muscle coronary circulation ventricular dynamics systemic arterial tree microcirculation systemic veins pulmonary vasculature control mechanisms in specific vascular beds and cardiovascular system control The last 3 sections offer tutorial overviews of theoretical and experimental methods applied to the cardiovascular system and of cardiovascular instrumentation and computer analysis Cardiovascular Physiology Concept Hannah Ramirez,2020-08-23 Cardiovascular Physiology Concept Short Book Description An Introduction to Cardiovascular Physiology provides the student with the key concepts of cardiovascular physiology Cardiovascular Physiology Questions for Self Assessment With Illustrated Answers Cardiovascular Physiology

Concept full Book Description Overview of the cardiovascular system The cardiac cycle Cardiac myocyte excitation and contraction Initiation and nervous control of heart beat Electrocardiography and arrhythmias Control of stroke volume and cardiac output Assessment of cardiac output and peripheral pulse Haemodynamics flow pressure and resistance The endothelial cell The microcirculation and solute exchange Circulation of fluid between plasma interstitium and lymph Vascular smooth muscle excitation contraction and relaxation Control of blood vessels I Intrinsic control Control of blood vessels II Extrinsic control by nerves and hormones Specialization in individual circulations Cardiovascular receptors reflexes and central control Coordinated cardiovascular responses Cardiovascular responses in pathological situations The aim of this collection of over 230 questions is to offer students an element of self assessment as they progress through the companion book or revise for examinations Lecturers may find some of the questions useful as a template when setting questions of their own but should note that the questions are primarily educational in intent their discriminatory power has not been tested The questions are grouped under the same headings as the chapters of the companion textbook so they become progressively more advanced see Contents Occasional statements call for information from later chapters Medically relevant questions are introduced wherever they are appropriate I have set at least one question on each learning objective given at the start of the chapter in the companion volume to help you assess your achievement of the learning objectives Some questions require you to integrate information from other chapters too The questions aim to test basic understanding fundamental principles and medical relevance Hopefully they avoid excessive detail always the examiner's easy option The questions Most of the questions are multiple choice questions MCQs generally with five true false statements but occasionally more or less than five Although some educationalists now demand single correct answer questions SAQs one correct answer out of four or five options these test less knowledge so the MCQ style has been retained here To add variety there is a sprinkling of other styles of question such as extended matching questions i.e. choose the best answer from a list data interpretation problems and little numerical problems that test reasoning power and ability to do simple calculations The answers Each answer is accompanied by a brief explanation and very often an illustrative figure which should help if you got the answer wrong Most of the figures are from the accompanying textbook but there are also new explanatory diagrams after some questions It is sometimes difficult to avoid ambiguity in MCQ questions so use your common sense choose the answer that will be right most of the time rather than a remote rare possibility Nevertheless if you disagree with the official answer do let me know

Immerse yourself in the artistry of words with is expressive creation, **Cardiovascular System Answers** . This ebook, presented in a PDF format (PDF Size: *), is a masterpiece that goes beyond conventional storytelling. Indulge your senses in prose, poetry, and knowledge.
