This section describes how Gregor Mendel studied the inheritance of traits in garden peas and what his conclusions were.

Introduction (page 263)

1. The scientific study of heredity is called _____.

Gregor Mendel's Peas (pages 263–264)

1. Circle the letter of each sentence that is true about Gregor Mendel's peas.
- The male parts of pea flowers produce eggs.
 - When pollen fertilizes an egg cell, a seed for a new plant is formed.
 - Pea plants normally reproduce by self-pollination.
 - Seeds that are produced by self-pollination inherit their characteristics from two different plants.
2. What does it mean when pea plants are described as being true-breeding? _____
3. To perform his experiments, how did Mendel prevent pea flowers from self-pollinating and control their cross-pollination? _____

Genes and Dominance (pages 264–265)

Match the term with its definition.

	Definitions	Terms
_____	5. Specific characteristics that vary from one individual to another	a. genes
_____	6. The offspring of crosses between parents with different traits	b. hybrids
_____	7. Observed factors that determine traits	c. traits
_____	8. The different forms of a gene	d. alleles
9.	State the principle of dominance. _____	
10.	Is the following sentence true or false? An organism with a recessive allele for a particular form of a trait will always have that form. _____

Kellogg, 2006 **A Textbook of Microbiology:** Dubey R.C. & Maheshwari D.K., 2023 This new edition of A Textbook of Microbiology continues to provide a comprehensive coverage on the basic principles of the subject with its focus on the concepts of ecology of microorganisms The book has been written in lucid and easily understandable language for students Each chapter has self test exercise at the end of the book Besides fulfilling the needs of undergraduate students this book would also be useful for postgraduate students as well as aspirants of various competitive examinations *TEXTBOOK OF ANIMAL BEHAVIOUR* FATIK BARAN MANDAL, 2012-01-17 This well accepted book now stands in its second edition is a time honoured revision and extension of the previous edition Beginning with an introduction to the study of animal behaviour the book explains the various aspects of behavioural biology incorporating a wealth of information from molecular biology neurobiology and socio biology with a new approach It describes different kinds of innate and learned behaviours animal communications defensive behaviours such as camouflage and mimicry with suitable illustrations The book incorporates the introductory concepts of biomimicry in an attractive manner Further it discusses biorhythms migration in fish and birds in addition to evolution and physiological basis of migration The text also presents the important aspects of socio biology and social behaviours such as feeding adaptation prey defence territoriality aggression altruism sexuality and parental care Finally it provides discussions on behavioural ecology in the context of conservation biology and human behaviour The book presents the basic principles of animal behaviour with the aid of carefully selected examples from both the recent and classic literature along with an emphasis on readability In the present edition topics like eusociality and behavioural theories have been incorporated This edition also includes as many as 11 published articles by the author on different topics related to the subject matter in box format to further strengthen the text The book is primarily intended for the students of B Sc M Sc Zoology Life Science for their courses It would be useful for the researchers in the field of animal behaviour and conservation biologists It would also attract readership studying Sociology and Anthropology **KEY FEATURES** Presents a well balanced view of ethology Discusses the current development in the field Includes a glossary

of important terms Offers end of chapter questions to check the students understanding of the concepts *TEXTBOOK OF ANIMAL BEHAVIOUR, THIRD EDITION* MANDAL, FATIK BARAN, 2015-09-18 This well accepted book now in its Third Edition is an extension of the previous edition The text has further enriched with more information to understand animal behaviour coherently and scientifically The book attempts to provide a reasonably suitable account of animal behaviour for undergraduate as well as postgraduate students Although behaviour of animals has fascinated people for a long behavioural biology has been incorporated in the syllabi very recently The study of behaviour received its important boost from the work of Charles Darwin who used the term instinct to refer to the natural behaviour of animals In the 1930s a comprehensive theory of animal behaviour emerged through the work of Konrad Lorenz and later of Niko Tinbergen Biological study of behaviour in fact came of age as a science when Lorenz Tinbergen and Karl von Frisch received the Nobel Prize for their contribution to science Observing and describing exactly what animals do is fascinating and scientific analysis of their behaviour is significant for several reasons Each species tends to have an array of stereotyped behaviours some of which are shared with related species but others are unique Ecology natural selection macroevolution microevolution and gene constitute the foundation of animal behaviour Various animal groups exhibit diverse strategies for their survival and reproduction which are discussed in this book The book is primarily intended for the students of B Sc M Sc Zoology Life Science for their courses It would be useful for the researchers in the field of animal behaviour and conservation biologists It would also attract students who are pursuing courses in Sociology and Anthropology Key features Presents a well balanced view of ethology Discusses the current development in the field Includes a glossary of important terms Offers chapter end questions to check the students understanding of the concept **African Zoology**, 2003 **Concepts of Genetics** William S. Klug, Michael R.
