## Cost Behavior and Cost-Volume-Profit Analysis

### QUESTIONS

1. Cost-volume-profit analysis is especially useful in the planning phase for a business. This phase involves predicting the volume of sales activity, the costs to be incurred, revenues to be received, and profits to be earned. It is also useful in what-if (sensitivity) analysis.

7. Definition: Contribution margin ratio = Contribution margin / Sales price per unit. The contribution margin ratio tells what percent of each sales dollar is available to cover fixed costs, with the remainder being profit.

To illustrate, if a company has a 75% contribution margin ratio, then 75% (or 75¢) of each sales dollar is available to cover fixed costs and contribute to profits.
9. A CVP analysis for a manufacturing company is simplified by assuming that the production and sales volumes are equal. This is the same as assuming no changes in beginning and ending inventory levels for the period.
10. The first is that although individual costs classified as fixed or variable might not behave precisely in those patterns, some variations of individual components in the
