*Algebra in Context* Amy Shell-Gellasch, John Thoo, 2015-10-15 An engaging new approach to teaching algebra that takes students on a historical journey from its roots to modern times. This book's unique approach to the teaching of mathematics lies in its use of history to provide a framework for understanding algebra and related fields. With Algebra in Context, students will soon discover why mathematics is such a crucial part not only of civilization but also of everyday life. Even those who have avoided mathematics for years will find the historical stories both inviting and gripping. The book's lessons begin with the creation and spread of number systems from the mathematical development of early civilizations in Babylonia, Greece, China, Rome, Egypt and Central America to the advancement of mathematics over time and the roles of famous figures such as Descartes and Leonardo of Pisa, Fibonacci. Before long it becomes clear that the simple origins of algebra evolved into modern problem solving. Along the way the language of mathematics becomes familiar and students are gradually introduced to more challenging problems. Paced perfectly, Amy Shell Gellasch and J B Thoo's chapters ease students from topic to topic until they reach the twenty first century. By the end of Algebra in Context, students using this textbook will be comfortable with most algebra concepts including Different number bases, Algebraic notation, Methods of arithmetic calculation, Real numbers, Complex numbers, Divisors, Prime factorization, Variation, Factoring, Solving linear equations, False position, Solving quadratic equations, Solving cubic equations, nth roots, Set theory, One to one correspondence, Infinite sets, Figurate numbers.
