Chemistry Health And The Environment:

Chemistry, Health and Environment Olov Sterner, 2010-06-08 This second edition of a successful title bridging toxicology and environmental chemistry adopts a unique approach that follows chemicals on a molecular level from the environment through the different uptake mechanisms into the body. Along the way this textbook explains the different routes of degradation and metabolism of the different classes of chemicals linking general chemical properties to their toxicological equivalents. All the chapters have been thoroughly updated and the contents significantly expanded including new chapters on modern pesticides, food chemicals and solvents as well as a chapter discussing the difficulties of accurate measurements of carcinogenesis in man. The text is aimed at a wide audience ranging from pharmacologists to environmental chemists and toxicologists.

Chemistry and Toxicology of Pollution Des W. Connell, Gregory J. Miller, 2022-12-13 Describes the transport of pollutants through the environment and their impact on natural and human systems, fully updated to cover key topics in modern pollution science. *Chemistry and Toxicology of Pollution* examines the interactions and adverse effects of pollution on both natural ecosystems and human health, addressing chemical, toxicological and ecological factors at both the regional and global scale. The book is written using a conceptual framework that follows the interaction of a pollutant with the environment from distribution in the various abiotic sectors of the environment to exposure and effects on individuals and ecosystems. The authors also highlight the critical role of various socio-economic, political and cultural aspects in achieving sustainable goals, strategies and science-based solutions to pollution and health. This comprehensive volume covers the chemical behavior and governing principles of pollutants, their interactions with humans and ecosystems, and the methods and processes of environmental risk assessment and pollution management. Extensively revised and expanded, the second edition equips readers with the knowledge required to help lead the way towards a healthy and sustainable future. New chapters address current pollution issues such as global warming and climate change, recent advances in environmental science, the monitoring and evaluation of new and emerging pollutants, risk assessment and remediation, and innovative pollution management approaches and techniques. With in-depth material on human toxicology integrated throughout the text, *Chemistry and Toxicology of Pollution* provides an effective framework for interpreting the information produced by international, national and local agencies. Presents unifying theories and principles supported by up-to-date scientific literature. Offers broad coverage of pollution science with an emphasis on North America, the UK, Europe, China, India and Australia. Discusses the similarities and differences of the impact of pollutants on the natural environment and humans. *Chemistry and Toxicology of Pollution* Second Edition enables readers to view pollution in its correct perspective and develop appropriate control measures.
