

## Chapter 11 (Intelligence) Study Guide

### Objective 1: What Is Intelligence?

#### Definitions:

- Intelligence – mental quality consisting of the ability to learn from experience, solve problems, and use knowledge to adapt to new situations.

#### Concepts:

- What is the difficulty in defining intelligence and explain what it means to reify intelligence. – Intelligence is not a single ability; it is a concept. IQ scores lead people to believe they are at a concrete level of intelligence when in fact the IQ scores is merely a measure of how one performed on a particular test. Intelligence is a description of what allows an individual to be successful within a culture.

#### Example:

- Saying that "She has an IQ of 120" as if that is a descriptor of her total ability.

#### Sample test question:

- Which of the following is not a description of intelligence:
  - Ability to learn from experience.
  - An IQ score
  - Problem solving
  - Use of knowledge to adapt to new situations.

### Objective 2: General Intelligence

#### Definitions:

- Factor analysis – a statistical procedure that identifies clusters of related items (called factors) on a test; used to identify different dimensions of performance that underlies one's total score.
- General intelligence (g) – a general intelligence factor that according to Spearman and others underlies specific mental ability and is therefore measured by every task on an intelligence test.

#### Concepts:

- Is intelligence one general ability or several specific abilities?
  - Tested by factor analysis. Spearman believed that "g" underlies various clusters; those who tend to score high in one area likely will score high in others.
  - Thurston did not rank his subjects on a single scale but measured several clusters of abilities such as word fluency, verbal comprehension, spatial ability, perceptual speed, numerical ability, inductive reasoning, and memory. However again individuals who scored well in one domain also tended to score well in others.

Child Development Study Guide, Fourth Edition Bukatko, 2000-07 The Intelligence Quotient and the Ability to Answer Various Types of Physics Questions Michael Mariner Cates, 1928 Study Guide and Workbook to Accompany Zimbardo and Weber's Psychology, Second Edition Peter C. Gram, Philip G.

Zimbardo, 1997 Psychology Third Edition builds upon the experience and reputations of Phil Zimbardo and Ann Weber with the addition of a new co author, Bob Johnson, who has a wealth of teaching experience at the community college level. This briefer, less expensive book presents psychology in a meaningful, manageable format that focuses on the key questions and core concepts of psychology. Introductory psychology covers such a wide range of topics and issues that it becomes difficult for readers to see the forest for the trees. To make key psychological concepts more meaningful, the authors found inspiration in a classic chess study. This study showed that experts did no better than novices at remembering the location of pieces on a chess board when they were placed randomly. Only when the patterns represented actual game situations did they make sense and therefore become more easily memorable for the experts. Clearly meaningful patterns are easier to remember and understand than random arrangements and Psychology applies this by presenting the field of psychology in meaningful

patterns to enhance comprehension These concepts are then applied to readers own lives study skills and the world around them Finally Psychology integrates a cross cultural and multicultural perspective to make psychology meaningful for everyone For anyone interested in Introductory Psychology *Student Study Guide for Use with Lifespan Development* Santrock,2001-08
