Ramberg,2017-05-15 Offering a comprehensive narrative of the early history of stereochemistry Dr Ramberg explores the reasons for and the consequences of the fundamental change in the meaning of chemical formulas with the emergence of stereochemistry during the last quarter of the nineteenth century As

yet relatively unexplored by historians the development of stereochemistry the study of the three dimensional properties of molecules provides a superb case study for exploring the meaning and purpose of chemical formulas as it entailed a significant change in the meaning of chemical formulas from the purely chemical conception of structure to the physico chemical conception of molecules provided by the tetrahedral carbon atom This study is the first to treat the emergence of the unique visual language of organic chemistry between 1830 and 1874 to place in context the near simultaneous proposal of the tetrahedral carbon atom by J H van t Hoff and J A Le Bel in 1874 Dr Ramberg then examines the research programs in stereochemistry by Johannes Wislicenus Arthur Hantzsch Victor Meyer Carl Bischoff Emil Fischer and Alfred Werner showing how the emergence of stereochemistry was a logical continuation of established research traditions in chemistry In so doing he also illustrates the novel and controversial characteristics of stereochemical ideas especially the unprecedented use of mechanistic and dynamic principles in chemical explanation
