States of Matter**Section 11.1 Gases**

In your textbook, read about the kinetic molecular theory.

Complete each statement.

1. The kinetic molecular theory describes the behavior of gases in terms of particles in motion.

2. The kinetic molecular theory makes the following assumptions:

- In a sample of a gas, the volume of the gas particles themselves is very small, compared to the volume of the sample.
- Because gas particles are free space, there are no significant attractive or repulsive forces between gas particles.
- The particles are in constant and random motion.
- The collisions between gas particles are elastic, that is, no kinetic energy is lost.

3. The kinetic energy of a particle is represented by the equation $E_k = \frac{1}{2}mv^2$.

4. Temperature is a measure of the average kinetic energy of the particles in a sample of matter.

In your textbook, read about exploring the behavior of gases.

For each statement below, write true or false.

True 5. Gases are free space that while because there is a lot of space between the particles of a gas.

True 6. The random motion of gas particles causes a gas to expand until it fills its container.

False 7. The density of a gas decreases as it is compressed.

True 8. If you can fit two into a space occupied by another gas.

True 9. The diffusion of a gas is caused by the random motion of the particles of the gas.

False 10. Lighter gas particles diffuse less rapidly than do heavier gas particles.

True 11. During effusion a gas escapes through a tiny opening into a vacuum.

False 12. Graham's law of effusion states that the rate of effusion for a gas is directly related to the square root of its molar mass.
