Chemistry Principles Patterns And Applications:

General Chemistry Bruce Averill, Patricia Eldredge, 2011

Chemistry Bruce Averill, Patricia Eldredge, 2006-06

Chemistry Principles Patterns and Applications represents the next step in general chemistry texts with an emphasis on contemporary applications and an intuitive problem solving approach that helps students discover the exciting potential of chemical science. The book features modern applications early integration of examples from organic and biochemistry and a strong approach to problem solving that moves away from rote memorization to a thorough understanding of key concepts and recognition of important patterns. The worked examples throughout each chapter show students how to develop strategies and thought processes that will enable them to solve problems both quantitatively and conceptually. The text incorporates fresh up to date applications from the three major areas of modern research materials environmental chemistry and biological science. The authors integrate the applications early in the text and consistently throughout each chapter to engage students interest and stimulate their curiosity. The unparalleled art program includes illustrations created with the most modern molecular software available and the use of authoritatively recognized databases. Chemistry Principles Patterns and Applications comes with a powerful media package that includes Mastering General Chemistry a groundbreaking online tutorial and homework system that allows instructors to assign quizzes and tutorials for a grade and gives students immediate and individualized feedback.

General Chemistry, 2011. The overall goal of the authors with General Chemistry Principles Patterns and Applications was to produce a text that introduces the students to the relevance and excitement of chemistry. Although much of first year chemistry is taught as a service course Bruce and Patricia feel there is no reason that the intrinsic excitement and potential of chemistry cannot be the focal point of the text and the course. So they emphasize the positive aspects of chemistry and its relationship to students lives which requires bringing in applications early and often. In addition the authors feel that many first year chemistry students have an enthusiasm for biologically and medically relevant topics so they use an integrated approach in their text that includes explicit discussions of biological and environmental applications of chemistry. Topics relevant to materials science are also introduced to meet the more specific needs of engineering students. To facilitate integration of such material simple organic structures nomenclature and reactions are introduced very early in the text and both organic and inorganic examples are used wherever possible. This approach emphasizes the distinctions between ionic and covalent bonding thus enhancing the students chance of success in the organic chemistry course that traditionally follows general chemistry. Finally the authors made a conscious effort to treat material that has traditionally been relegated to boxes and thus perhaps perceived as peripheral by the students by incorporating it into the text to serve as a learning tool. To begin the discussion of chemistry rapidly the traditional first chapter introducing units significant figures conversion factors dimensional analysis and so on has been reorganized. The material has been placed in the chapters where the relevant concepts are first introduced thus providing three advantages

Eliminates the tedium of the traditional approach which introduces mathematical operations at the outset and thus avoids the perception that chemistry is a mathematics course Avoids the early introduction of operations such as logarithms and exponents which are typically not encountered again for several chapters and may easily be forgotten when they are needed and Provides a review for those students who have already had relatively sophisticated high school chemistry and math courses although the sections are designed primarily for students unfamiliar with the topic Consider this text for your course if you are interested in In summary a text that represents a step in the evolution of general chemistry texts toward one that reflects the increasing overlap between chemistry and other disciplines Most importantly if you want a text that discusses exciting and relevant aspects of biological environmental and materials science that are usually relegated to the last few chapters in a format that allows the you to tailor the emphasis to the needs of the class Request your desk copy today
