**Marine Environmental Biology and Conservation** Daniel W. Beckman, 2013 Marine Environmental Biology and Conservation provides an introduction to the environmental and anthropogenic threats facing the world's oceans and outlines the steps that can and should be taken to protect these vital habitats. It begins with a brief overview of the essentials of marine biology and oceanography necessary to understand the conservation material. The book then moves through the different habitats in the marine environment such as coastal ecosystems, the open ocean, and the deep sea, exploring the organisms that live there and what conservation dangers and solutions affect these areas.

**Biology, Study Guide** Gilbert D. Brum, Larry McKane, Gerald Karp, 1993-10-28 This lively, richly illustrated text makes biology relevant and appealing, revealing it as a dynamic process of exploration and discovery. Portrays biologists as they really are: human beings with motivations, misfortunes, and mishaps much like everyone has. Encourages students to think critically, solve problems, and apply biological principles to everyday life.

*Ecological Moral Character* Nancy M. Rourke, 2024 This book of metaethics focuses on Catholic virtue theory. To create an ecological model through which we can imagine the human moral character, the book integrates concepts of ecology with Aquinas's vision of moral character. The book describes the dynamics of a moral character in terms of the processes and functions that take place in an ecosystem. The virtues parallel species and other aspects of ecosystems, and other participants such as the passions, the will, and the intellect are also described in terms of this model. The book is a creative project with a solid and documented scholarly foundation. It aims to begin a conversation about a rarely discussed aspect of virtue ethics. The images we use to think about moral character are powerful. They inform our understandings of the moral virtues and the ways in which moral character develops. The book asks readers to choose deliberately the models we use to imagine moral character and offers this ecological virtue model as a good example for our own time.

**Environmental Science** Michael L. McKinney, Robert M. Schoch, Logan Yonavjak, 2012 Updated with the latest data from the field, Environmental Science: Systems and Solutions, Fifth Edition, explains the concepts and teaches the skills needed to understand multi-faceted and often very complex environmental issues. The authors present the arguments, rebuttals, evidence, and counterevidence from many sides of the debate. The Fifth Edition includes new Science in Action boxes which feature cutting-edge case studies and essays contributed by subject-matter experts that highlight recent and ongoing research within environmental science. With an Earth-as-a-system approach, the text continues to emphasize Earth's intricate web of interactions among the biosphere, atmosphere, hydrosphere, and lithosphere, and how we are central components in these four spheres. This flexible, unbiased approach highlights:

1. how matter cycles over time through Earth's systems
2. the importance of the input-throughput-output processes that describe the global environment
3. how human activities and consumption modify Earth's systems
4. and the scientific, economic, and policy solutions to environmental problems.

Revised and updated to reflect current trends and

statistics within Environmental Science New content on renewable energy solar panels and compact fluorescent light bulbs The latest information on Hydropower and the advantages and disadvantages of hydroelectric energy The companion website includes robust learning tools that enable students to make full use of today's learning technology Students will find practice quizzes virtual flashcards answers to in text questions and links to additional coverage regarding material discussed in the text Instructor Resources include an instructor's manual Test Bank PowerPoint Lecture Outline Slides and a PowerPoint Image Bank
