Machine Learning and Systems Biology in

Genomics and Health Shailza Singh, 2022-02-04 This book discusses the application of machine learning in genomics. Machine Learning offers ample opportunities for Big Data to be assimilated and comprehended effectively using different frameworks. Stratification, diagnosis, classification, and survival predictions encompass the different health care regimes representing unique challenges for data pre-processing, model training, refinement of the systems with clinical implications. The book discusses different models for in-depth analysis of different conditions. Machine Learning techniques have revolutionized genomic analysis. Different chapters of the book describe the role of Artificial Intelligence in clinical and genomic diagnostics. It discusses how systems biology is exploited in identifying the genetic markers for drug discovery and disease identification. Myriad number of diseases, whether be infectious, metabolic, cancer, can be dealt effectively, which combines the different omics data for precision medicine. Major breakthroughs in the field would help reflect more new innovations which are at their pinnacle stage. This book is useful for researchers in the fields of genomics, genetics, computational biology, and bioinformatics.

Building Continents of Knowledge in Oceans of Data: The Future of Co-Created eHealth Daniel Karlsson, Gunnar O. Klein, Anne Moen, 2018-05-15 The domain of eHealth faces ongoing challenges to deliver 21st century healthcare. Digitalization, capacity building, and user engagement with truly interdisciplinary and cross-domain collaboration are just a few of the areas which must be addressed. This book presents 190 full papers from the Medical Informatics Europe MIE 2018 conference held in Gothenburg, Sweden, in April 2018. The MIE conferences aim to enable close interaction and networking between an international audience of academics, health professionals, patients, and industry partners. The title of this year's conference is Building Continents of Knowledge in Oceans of Data. The Future of Co-Created eHealth and contributions cover a broad range of topics related to the digitalization of healthcare, citizen participation, data science, and changing health systems, addressed from the perspectives of citizens, patients, and their families, healthcare professionals, service providers, developers, and policy makers. The second part of the title, in particular, has attracted a large number of papers describing strategies to create, evaluate, adjust, or deliver tools and services for improvements in healthcare organizations or to enable citizens to respond to the challenges of dealing with health systems. Papers are grouped under the headings: standards and interoperability, implementation and evaluation, knowledge management, decision support, modeling and analytics, health informatics, education and learning systems, and patient-centered services. Attention is also given to development for sustainable use, educational strategies, and workforce development, and the book will be of interest to both
