## **Advanced Data Structures**

Suman Saha,Shailendra Shukla,2019-06-28 Advanced data structures is a core course in Computer Science which most graduate program in Computer Science Computer Science and Engineering and other allied engineering disciplines offer during the first year or first semester of the curriculum The objective of this course is to enable students to have the much needed foundation for advanced technical skill leading to better problem solving in their respective disciplines Although the course is running in almost all the technical universities for decades major changes in the syllabus have been observed due to the recent paradigm shift of computation which is more focused on huge data and internet based technologies Majority of the institute has been redefined their course content of advanced data structure to fit the current need and course material heavily relies on research papers because of nonavailability of the redefined text book advanced data structure To the best of our knowledge well known textbook on advanced data structure provides only partial coverage of the syllabus The book offers comprehensive coverage of the most essential topics including Part I details advancements on basic data structures viz cuckoo hashing skip list tango tree and Fibonacci heaps and index files Part II details data structures of different evolving data domains like special data structures temporal data structures external memory data structures distributed and streaming data structures Part III elucidates the applications of these data structures on different areas of computer science viz network www DBMS cryptography graphics to name a few The concepts and techniques behind each data structure and their applications have been explained Every chapter includes a variety of Illustrative Problems pertaining to the data structure s detailed a summary of the technical content of the chapter and a list of Review Questions to reinforce the comprehension of the concepts The book could be used both as an introductory or an advanced level textbook for the advanced undergraduate graduate and research programmes which offer advanced data structures as a core or an elective course While the book is primarily meant to serve as a course material for use in the classroom it could be used as a starting point for the beginner researcher of a specific domain

## *Stream Data Mining: Algorithms and Their Probabilistic Properties*

Leszek Rutkowski,Maciej Jaworski,Piotr Duda,2019-03-16 This book presents a unique approach to stream data mining Unlike the vast majority of previous approaches which are largely based on heuristics it highlights methods and algorithms that are mathematically justified First it describes how to adapt static decision trees to accommodate data streams in this regard new splitting criteria are developed to guarantee that they are asymptotically equivalent to the classical batch tree

Moreover new decision trees are designed leading to the original concept of hybrid trees. In turn nonparametric techniques based on Parzen kernels and orthogonal series are employed to address concept drift in the problem of non stationary regressions and classification in a time varying environment. Lastly an extremely challenging problem that involves designing ensembles and automatically choosing their sizes is described and solved. Given its scope the book is intended for a professional audience of researchers and practitioners who deal with stream data e.g. in telecommunication, banking and sensor networks.
