The main models covered in this book include linear regression logistic regression tree models and random forests ensemble learning sparse learning principal component analysis kernel methods including the support vector machine and kernel regression and deep learning. Each chapter introduces two or three techniques. For each technique the book highlights the intuition and rationale first then shows how mathematics is used to articulate the intuition and formulate the learning problem. R is used to implement the techniques on both simulated and real world dataset. Python code is also available at the book's website <http://dataanalyticsbook.info>
