## Tutorial – Static pages

**Note:** This tutorial assumes you've downloaded CodeIgniter and installed the framework in your development environment.

The first thing you're going to do is set up a **controller** to handle static pages. A controller is simply a class that helps delegate work. It is the glue of your web application.

For example, when a call is made to:

```
http://example.com/news/latest/10
```

We might imagine that there is a controller named "news". The method being called on news would be "latest". The news method's job could be to grab 10 news items, and render them on the page. Very often in MVC, you'll see URL patterns that match:

```
http://example.com/[controller-class]/[controller-method]/[arguments]
```

As URL schemes become more complex, this may change. But for now, this is all we will need to know.

Create a file at **application/controllers/pages.php** with the following code.

```
<?php  
  
class Pages extends CI_Controller {  
  
    public function view($page = 'home')  
    {  
  
    }  
  
}
```

You have created a class named "pages", with a view method that accepts one argument named \$page. The pages class is extending the CI\_Controller class. This means that the new pages class can access the methods and variables defined in the CI\_Controller class (**system/core/Controller.php**).

The controller is what will become the center of every request to your web application. In very technical CodeIgniter discussions, it may be referred to as the *super object*. Like any php class, you refer to it within your controllers as \$this. Referring to \$this is how you will load libraries, views, and generally

*Developer's Guide to Social Programming* Mark D. Hawker, 2010-08-09 In The Developer's Guide to Social Programming Mark Hawker shows developers how to build applications that integrate with the major social networking sites. Unlike competitive books that focus on a single social media platform, this book covers all three leading platforms: Facebook, OpenSocial, and Twitter. Hawker identifies the characteristics of superior, highly engaging social media applications and shows how to use the Facebook platform, Google Friend Connect, and the Twitter API to create them. You'll find practical solutions and code for addressing many common social programming challenges, from site registration to search, blog commenting, to creating location-based applications. Hawker concludes by walking you through building a complete integrated social application, one that works seamlessly across all leading platforms and draws on powerful features from each. Coverage includes: Working with the Twitter API, including the Search API, Lists API, and Retweets API; Authenticating users with Twitter OAuth; Mastering the Facebook API, FQL, and XFBML; Utilizing the Facebook JavaScript Library for creating dynamic content and animation; Exploring the Google Friend Connect JavaScript API and integrating with the OpenSocial API; Using Facebook's tools for sharing, social commenting, stream publishing, and live conversation; Using the PHP OpenSocial Client Library; and Google Friend Connect. Creating, testing, and submitting Google Friend Connect gadgets.
