

## Chapter 18 — Magmatic Activity

### 18.1 — Magmas

#### Types of Magmas

- the three main types of magmas are mafic, felsic, and ultramafic:
  - igneous is used to describe the magmas that solidify at the surface
  - felsic: has the same composition as felsic
    - Howard used felsic and eutectic as examples of these (18.2)
  - mafic: has the same composition as mafic
    - because Fe, Mg are examples of this

#### Magmatic Compositions

- there are a number of factors that determine type of magma (Table 18.1)
- one is viscosity — the internal resistance to flow

#### Mafic Magmas

- this normally forms large nodules in the upper mantle rock and has low viscosity — flows easier

#### Felsic Magmas

- this is found along continental margins, where elements tend to solidify into Earth's crust
- has intermediate viscosity

#### Ultramafic Magmas

- forms when molten material rises and mixes with the overlying crust
- this has a high viscosity

#### Viscosity

- the viscosity of magmas and how they flow against rock compositions and concentrations
  - the fatter the magma, the lower the viscosity
  - the amount of silica increases the viscosity

#### Volcanoes (18.2), recall is still needed

Keller, Duane E. DeVecchio, 2019-03-29 The new revised fifth edition of Natural Hazards remains the go to introductory level survey intended for university and college courses that are concerned with

earth processes that have direct and often sudden and violent impacts on human society. The text integrates principles of geology, hydrology, meteorology, climatology, oceanography, soil science, ecology, and solar system astronomy. The textbook explains the earth processes that drive hazardous events in an understandable way, illustrating how these processes interact with our civilization and describes how we can better adjust to their effects. Written by leading scholars in the area, the new edition of this book takes advantage of the greatly expanding amount of information regarding natural hazards, disasters, and catastrophes. The text is designed for learning with chapters broken into small, consumable chunks of content for students. Each chapter opens with a list of learning objectives and ends with revision as well as high level critical thinking questions. A Concepts in Review feature provides an innovative end of chapter section that breaks down the chapter content by parts, reviewing the learning objectives, summary points, important visuals, and key terms. New case studies of hazardous events have been integrated into the text, and students are invited to actively apply their understanding of the five fundamental concepts that serve as a conceptual framework for the text. Figures, illustrations, and photos have been updated throughout. The book is designed for a course in natural hazards for nonscience majors, and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society. *Glencoe Earth Science* Ralph M. Feather, 1999. Earth science is the study of Earth and space. It is the study of such things as the transfer of energy in Earth's atmosphere, the evolution of landforms, patterns of change that cause weather, the scale and structure of stars, and the interactions that occur among the water, atmosphere, and land. Earth science in this book is divided into four specific areas of study: geology, meteorology, astronomy, and oceanography. p 8 9 **Sunday School Times**, 1894 **Environmental Science** Bernard J.
