| Word          | Definition                                                                                                                          |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Cell Membrane | A thin structure that surrounds both animal and plant cells, its main job is to control what enters and leaves the cell (door man). |
| Cell Wall     | Plants cells – the area outside the cell membrane, it is a stiff structure that helps support and protect the inside of the cell.   |
| Nucleus       | This organelle controls the cell, it is known as the “brain” of the cell, or mayor of the town.                                     |
| Cytoplasm     | A jellylike substance that make up all the living material in a cell except the nucleus.                                            |
| Mitochondria  | Structures that are the powerhouse of the cell (produce power).                                                                     |
| Vacuoles      | An organelle that stores food, water, and wastes in a cell and helps get rid of wastes (warehouse).                                 |
| Chloroplasts  | Plant cells have green, oval-shaped organelles that help with photosynthesis.                                                       |
| Ribosomes     | Organelle that produces protein for the cell.                                                                                       |
