MOLECULAR BIOLOGY OF THE CELL, SIXTH EDITION

CHAPTER 1: CELLS AND GENOMES

1. Scientists discover more than ten thousand new species of living organisms every year. What is shared between all of these organisms?
 - A. They are made of cells, whose nuclei enclose their DNA.
 - B. They obtain their energy from sunlight.
 - C. They produce and use adenosine triphosphate (ATP).
 - D. Their genome contains at least 1000 genes.
 - E. All of the above.

2. All cells ...
 - A. have membrane transport proteins.
 - B. synthesize proteins on the ribosome.
 - C. replicate their genome by DNA polymerization.
 - D. transcribe their genetic information by RNA polymerization.
 - E. All of the above.

3. Imagine a segment of DNA (within a gene) encoding a certain amount of information in its nucleotide sequence. When this segment is fully transcribed into mRNA and then translated into protein, in general, ...
 - A. the protein sequence would carry more information compared to the DNA and mRNA sequences, because its alphabet has 20 letters.
 - B. the protein sequence would carry less information compared to the DNA and mRNA sequences, because several codons can correspond to one amino acid.
 - C. the amount of information in the mRNA sequence is lower, because the mRNA has been transcribed using only one of the DNA strands as the template.
 - D. the amount of information in the mRNA sequence is higher, because several mRNA molecules can be transcribed from one DNA molecule.

4. Which of the following processes that happens inside a cell DOES NOT normally require consumption of free energy by the cell?
 - A. Replication of the genetic material

[Essential Cell Biology Test Bank](#) Kelly Komachi, Rosann Tung, 1997 **Loose-leaf Version for Molecular Cell Biology** Harvey Lodish, Arnold Berk, Chris A. Kaiser, Monty Krieger, Matthew P. Scott, Anthony Bretscher, Hidde Ploegh, Paul Matsudaira, 2012-09-01 Molecular Cell Biology presents the key concepts in cell biology and their experimental underpinnings The authors all world class researchers and teachers incorporate medically relevant examples where appropriate to help illustrate the connections between cell biology and health and human disease As always a hallmark of

Molecular Cell Biology is the use of experiments to engage students in the history of cell biology and the research that has contributed to the field. New Co Author Angelika Amon. The new edition of Molecular Cell Biology introduces a new member to our author team, respected researcher and teacher Angelika Amon of the Massachusetts Institute of Technology. Dr Amon is an Investigator at the Howard Hughes Medical Institute as well as a member of the Koch Institute for Integrative Cancer Research and the National Academy of Sciences. Her laboratory studies the molecular mechanisms that govern chromosome segregation during mitosis and meiosis and the consequences when these mechanisms fail during normal cell proliferation and cancer development.

Increased Clarity Improved Pedagogy In the new edition the authors have scrutinized every chapter with an eye toward bringing out key concepts and making connections easier to follow. Perennially challenging topics such as cellular energetics, cell signaling, and immunology have been revised to improve student understanding. Coverage of developmental biology has been streamlined to focus on just those key areas central to cell biology courses. Every figure in the book was reconsidered and, if possible, simplified to highlight key lessons. Revised end of chapter materials include new questions, including additional Analyze the Data problems, to give students added practice at interpreting experimental evidence. The result is a book that balances currency and experimental focus with attention to clarity, organization, and pedagogy.

Highlights of the New Edition Chapter 1, Molecules, Cells, and Evolution, now frames cell biology in the light of evolution because we all come from the same ancestor cell; the molecules and processes of cell biology are similar in all forms of life. We can use model organisms to study aspects of cell structure and function that have been conserved across millions of years of evolution. Chapter 9, Culturing, Visualizing, and Perturbing Cells, has been rewritten to include cutting edge methods including FRAP, FRET, siRNA, and chemical biology, making it a state of the art methods chapter. Cell signaling chapters, Chapters 15 and 16, have been reorganized and illustrated with simplified overview figures to help students navigate the complexity of signaling pathways. Fully Reconceived Thoroughly Updated Chapter 19, The Eukaryotic Cell Cycle, now begins with the concept of START, a cell's commitment to entering the cell cycle, starting with DNA synthesis and then progresses through the cycle stages. The chapter focuses on yeast and mammals and uses general names for cell cycle components as much as possible.

New Discoveries, Methodologies, and Medical Examples New discoveries, new methodologies, and new medical examples are included throughout.
