

Sample Physics 130-1 Placement Exam

A. Multiple Choice Questions:

1. A cable is used to take construction equipment from the ground to the top of a tall building. During the trip up, when (if ever) is the tension in the cable less than the weight of the equipment?

- a. at the beginning of the trip, when the equipment is first moving upward from the ground
- b. during the middle part of the trip, when the equipment is moving upward with constant speed
- c. at the end of the trip, when the equipment is slowing to come to a halt.
- d. The tension is never less than the weight of the equipment.

2. A boy whirls a stone in a horizontal circle above his head by means of a long string. As the stone moves, the force of tension in the string does work that is:

- a. positive
- b. negative
- c. zero

3. A kid stands at the left edge of a uniform sled of length L , which is stationary on frictionless ice. The sled and kid have equal masses. The kid walks to the right edge of the sled and the sled slides on the ice. Afterwards, how far and in what direction is the center of the sled from the center of mass of the sled-kid system?

- a. $L/8$, to the left
- b. $L/8$, to the right
- c. $L/4$ to the left
- d. $L/4$, to the right
- e. $L/2$, to the left
- f. $L/2$, to the right
- g. none of the above

4. A block slides down inclined plane #1. A ball rolls down inclined plane #2. Inclined plane #1 is identical to inclined plane #2 (same height & slope) except that inclined plane #1 is frictionless and inclined plane #2 is not. The block and the ball have the same mass and both start from the top of their inclined planes. Which object is moving faster (has greater translational speed) at the bottom of its incline?

- a. the block
- b. the ball
- c. The block & the ball have the same speed

5. A man stands on a platform that is rotating (without friction) with an angular speed of ω . His arms are outstretched and he holds a brick in each hand. The man then pulls his arms in and holds the bricks close to his body. As he does this, how does the angular speed ω of the platform change?

- a. ω increases
- b. ω decreases
- c. ω stays the same

6. A small block A sits on a large block B which rests on top of a frictionless table. Although there is no friction between block B and the table, there is negligible friction between block A and block B . Initially, the spring is at rest and block B is at the origin of an x - y coordinate system, with the x -axis running along the table. We then pull the block to the right and let it go. As the system undergoes simple harmonic motion with amplitude x_{\max} , block A is on the verge of slipping over B . When is slippage most likely?

- a. at $x = 0$
- b. at $x = x_{\max}$
- c. somewhere between $x = 0$ & $x = x_{\max}$
- d. equally likely at all points

7. If several cans of different sizes and shapes are all filled with the same liquid to the same depth, then:

- a. the weight of the liquid is the same for all cans.
- b. the force of the liquid on the bottom of each can is the same.
- c. the least pressure is at the bottom of the can with the largest bottom area.
- d. the greatest pressure is at the bottom of the can with the largest bottom area.
- e. the pressure on the bottom of each can is the same.

curricula A Study of an Objective Placement Examination for Sectioning College Physics Classes John Milton Willson, 1931 For several years the Department of Physics of the Missouri School of Mines has practiced sectioning of its classes in general physics The aim has been to segregate in one section the students of superior ability giving them a course including both the fundamentals of physics and their applications in engineering The remainder are given a course in fundamentals without placing so much stress upon the applications Another criterion used to supplement the first year grade record is the student's score on the Iowa Placement Examinations The physics examination consists of two parts the Training Series and the Aptitude Series These examinations are administered at the first two meetings of the class in general physics the Aptitude Examination being given on the first day and the Training Examination on the succeeding day it was thought that the administration of the Iowa Examinations requiring two periods was wasteful of time It was believed that an examination could be devised which could be administered in a single period and furnish information of sufficient worth The MSM Physics Placement Examination was the result This investigation is concerned with a critical study of the examination the aims of the study are to determine the probable worth of the examination as a unit and as compared with similar examinations Introduction leaves 1 3 **Holt Science and Technology** Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2001 **Physics Sample Test** Xam, 2004 **Physics and Medical College Admissions Sample Test** John D.
