Presently it is often assumed that at least in principle robots and social robots in particular have the potential to increase human well being across a wide range of sectors and application areas At the same time efforts to introduce such systems into our everyday environments have had only limited success and it is yet to be seen whether the impact of social robots on our daily lives professional and private will actually be beneficial Therefore there is a need to systematically address and study the long term use and presence of social robots in everyday environments where humans not only interact with robots but also have them integrated into the totality of their lived experiences in everyday life One of the main ways to investigate human engagement with social robots in everyday environments is through HRI studies conducted in the wild While such an approach has certainly been instrumental to and is increasingly used in HRI research we propose here to further expand the underlying theoretical and methodological frameworks to address the notion of everyday life The latter is viewed here as a useful concept and an umbrella term that allows us to address not only specific application domains for robots but also the continuity and totality of human lived experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in everyday settings has often been an explicit goal for robot development however the notion of everyday life has yet to be systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of disciplinary and interdisciplinary contributions to further develop the HRI domain

international relations by breaking them down into three levels of analysis individual state and international State level analysis examines the foreign policy behavior of states in terms of state characteristics For example some scholars say that all democracies behave a certain way they don t fight with other democracies Artificial intelligence impact governance As AI continues to evolve and permeate various aspects of our lives its implications for AI and how does it impact businesses AI artificial intelligence refers to machines that can perceive intelligence synthesize and infer information It is the science and engineering of intelligent machines that can mimic human intelligence to perform tasks and then on the information they collect improve themselves based AI is designed to significantly enhance human capabilities and contributions making it a valuable business asset

Science Fiction as Legal Imaginary Alex Green, Mitchell Travis, Kieran Tranter, 2024-11-21 This book examines how science fiction informs the legal imagination of technological futures Science fiction the contributors to this book argue is a storehouse of images tropes concepts and memes that inform the legal imagination of the future and in doing so generate impetus for change Specifically the contributors examine how science fictions imagine human life in space in the digital and as formed and negotiated by corporations They then connect this imaginary to how law should be understood in the present and changed for the future Across the chapters there is an urgent sense of the need for law as it has been and as it might become to order and safeguard the future for a multiplicity of vulnerable entities This book will appeal to scholars and students with interests in law and technology legal theory cultural legal studies and law and the humanities

The Dynamic Structure of Everyday Life Philip Agre, Massachusetts Institute of Technology. Artificial Intelligence Laboratory, 1988 A running argument means continually redeciding what to do Continually redeciding what to do is more flexible than executing a plan because it is more responsive to opportunities and contingencies It is possible to approximate the ideal of continual redecision because life is wholly a routine The routine portion of the reasoning leading to each moment s action can be implemented very efficiently by recording the reasons behind any novel bits of reasoning a method known as dependency maintenance A computer program called the running argument illustrates this point

Motor World for Jobbers, Dealers and Garagemen ,1923 **Visions of Artificial Intelligence** Stefan Raß, 2021-03-30 Master s Thesis from the year 2019 in the subject Computer Sciences Artificial Intelligence grade 1 University of Vienna language English abstract Artificial Intelligence AI is often considered to be one of the defining technologies which will be important in shaping the prosperity and power dynamics of the twenty first century In the last five years many governments around the world tried to implement policies that are intended to foster AI innovation in order to position themselves as leaders in a space that is thought to be the next global paradigm shift Europe and the United States are thought leaders in this field and have published policy documents aimed at deliberating the future progress of AI and defining national policies or research strategies which should serve as signposts for subsequent decisions Research in Science Technology Society STS studies has shown how sociotechnical imaginaries shape the ways emerging technologies

are assessed evaluated and regulated in differing political cultures They inform the visions that make certain options possible specific outcomes plausible and leave other avenues for policy dormant This thesis explores these imaginaries found in policy documents connected to regulatory attitudes towards AI and the social changes linked to this emerging technology in the United States and Europe along three dimensions First the dominant visions images and ideals associated with the technological innovation in AI Second the expectations of benefits and risks projected onto AI And third the imagined role of governance of AI in the policy documents as well as how society is imagined to be part of the assessment development and regulation The thesis suggests that AI offers a new and rich window into regulatory imaginaries in a specific moment of technological emergence Some of the uncovered attitudes towards AI are reflected in imaginaries connected to previous technologies however AI constitutes a novel moment of emergence that links to unique attitudes to regulating self learning algorithmic intelligence
