Creating Scientific Controversies Uncertainty Science:

Creating Scientific Controversies David Harker, 2015-10-01 For decades cigarette companies helped to promote the impression that there was no scientific consensus concerning the safety of their product The appearance of controversy however was misleading designed to confuse the public and to protect industry interests Created scientific controversies emerge when expert communities are in broad agreement but the public perception is one of profound scientific uncertainty and doubt In the first book length analysis of the concept of a created scientific controversy David Harker explores issues including climate change Creation science the anti vaccine movement and genetically modified crops Drawing on work in cognitive psychology social epistemology critical thinking and philosophy of science he shows readers how to better understand evaluate and respond to the appearance of scientific controversy His book will be a valuable resource for students of philosophy of science environmental and health sciences and social and natural sciences The Palgrave Handbook of Philosophy and Public Policy David Boonin, 2018-10-08 This book brings together a large and diverse collection of philosophical papers addressing a wide variety of public policy issues Topics covered range from long standing subjects of debate such as abortion punishment and freedom of expression to more recent controversies such as those over gene editing military drones and statues honoring Confederate soldiers Part I focuses on the criminal justice system including issues that arise before during and after criminal trials Part II covers matters of national defense and sovereignty including chapters on military ethics terrorism and immigration Part III which explores political participation manipulation and standing includes discussions of issues involving voting rights the use of nudges and claims of equal status Part IV covers a variety of issues involving freedom of speech and expression Part V deals with questions of justice and inequality Part VI considers topics involving bioethics and biotechnology Part VII is devoted to beginning of life issues such as cloning and surrogacy and end of life issues such as assisted suicide and organ procurement Part VIII navigates emerging environmental issues including treatments of the urban environment and extraterrestrial environments **The ^AFight Against Doubt** Inmaculada de Melo-Martín, Kristen Intemann, 2018-07-02 Dissent about widely accepted scientific claims can promote doubt about scientific evidence intimidate scientists stymie research and lead the public and policymakers to oppose needed policies To limit these problems The Fight against Doubt calls for facilitating greater trust between scientists and laypersons and recognizing the limits of science in policymaking Science Communication Annette Leßmöllmann, Marcelo Dascal, Thomas Gloning, 2019-12-16 The volume gives a multi perspective overview of scholarly and science communication exploring its diverse functions modalities interactional structures and dynamics in a rapidly changing world In addition it provides a guide to current research approaches and traditions on communication in many disciplines including the humanities technology social and natural sciences and on forms of communication with a wide range of audiences *Scientific Advice, Risk and Evidence Based Policy Making* Great Britain. Parliament. House of Commons. Science and Technology Committee, 2006 This

report presents the Committee's findings on the operation of the scientific advisory system as a whole. It builds on the case studies covered in three previous reports on MRI safety, the illegal drugs classification and ID card technologies. The Committee recommends that the role of Government Chief Scientific Adviser (GCSA) be split from that of Head of the Office of Science and Innovation to enable full attention to be given to the GCSA's cross-departmental functions. The GCSA would be better placed in a department such as the Cabinet Office which has cross-departmental responsibilities. The establishment of departmental CSAs is welcomed but more needs to be done to ensure they maximize their contribution to strategic decision making and policy development within departments. The report also recommends the establishment of a Government Scientific Service to enhance scientific support in the civil service and calls for greater involvement of learned societies and professional bodies in the advisory system. The Committee wants greater public investment in research to underpin evidence-based policy making with the establishment of a cross-departmental fund to commission independent research. The short-term nature of the political cycle should be counterbalanced by embedding horizon scanning into the policy making process. Transparency in policy making has improved but more could be done. Valuable work on risk should be continued and responsible coverage of risk by the media should be encouraged by greater involvement of departmental CSAs and greater clarity and consistency in public communication. *Science & Public Policy*, 2005

Public Understanding of Science, 2009 A forum for the emerging interdisciplinary field of public understanding of science, this journal encourages open debate of contrasting and even conflicting viewpoints on all aspects of the interrelationships between science and the public.

Making Meteorology Mikaela Sundberg, 2005 This thesis is about the production of knowledge in meteorological research. Meteorology is an interesting case because of its crucial role in defining the climate change problem but also because of its reliance on simulation modeling, a comparatively little studied scientific practice. The thesis provides an analysis of the central practices of simulation modeling and field experimentation. It draws upon concepts from social world theory where practice is closely related to work. The thesis also employs the notion of translation as developed by the actor network approach in order to analyse how different practices and entities become associated with each other. Empirical data was collected with interviews and participant observation and most of the fieldwork was conducted at the Department of Meteorology, Stockholm University.
