used to develop a mission based autonomy system UGV01 was used as a proof of concept platform before implementing the system onto a Cub Cadet RZT S zero turn mower The latest high precision satellite localization and waypoint automation technologies were tested on UGV01 A Pixhawk autopilot controller was used to achieve mission based autonomy High precision satellite localization was achieved through a Real Time Kinetic RTK positioning system established at the testing grounds The system was built with affordable RTK boards thereby demonstrating the ability of modern technology to provide a viable costeffective solution for autonomy Robot Operating System ROS was integrated into the ground control system of UGV01 to enhance its flexibility and functionality ROS was used to create an automated mission updating routine for UGV01 A simple object avoidance routine was created to demonstrate the sensor integration possibilities of ROS The Cub Cadet zero turn mower was modified to be compatible with the Pixhawk system developed for UGV01 A custom RS485 interface interpreted the outputs from the Pixhawk system to successfully control the drive wheels and mowing deck on the Cub Cadet
