

HOW DO I FLUSH A GASTROSTOMY TUBE?

Flush the tube before and after the administration of enteral nutrition or medication or 4-6 hourly (except during the night) if tube feeding is not in progress.

To prevent tube blockages, always follow the flushing advice and routine recommended by your healthcare professional.

Always check the cm markings at skin level and the length of the tube to make sure it remains unchanged, if it has changed **do not use** and contact your healthcare professional immediately.

It is important that you contact your Nutricia Homeward Nurse if you need any additional training.

Ensure the patient is positioned comfortably at an angle of 30-45°.

Before and after handling the tube wash your hands with liquid soap and water and dry them thoroughly.

You will need:

- 60ml enteral feeding syringe
- Water, type and volume as recommended by your healthcare professional.

ADMINISTER A WATER FLUSH USING THE PLUNGE METHOD

Draw up required volume of water in a 60ml enteral feeding syringe

Close clamp on feeding tube, if present

If no clamp is present kink the tube between your fingers to stop leakage

Remove cap from the feeding tube

Connect syringe to the tube, being careful not to over-tighten

Bacterial Artificial Chromosomes Shaying Zhao, Marvin Stodolsky, 2008-02-03 Several developmental and historical threads are woven and displayed in these two volumes of Bacterial Artificial Chromosomes the first on Library Construction Physical Mapping and Sequencing and the second on Functional Studies The use of large insert clone libraries is the unifying feature with many diverse contributions The editors have had quite distinct roles Shaying Zhao has managed several BAC end sequencing projects Marvin Stodolsky during 1970 1980 contributed to the elucidation of the natural bacteriophage prophage P1 vector system Later he became a member of the Genome Task Group of the Department of Energy DOE through which support flowed

for most clone library resources of the Human Genome Program HGP Some important historical contributions are not represented in this volume This preface in part serves to mention these contributions and also briefly surveys historical developments Leon Rosner deceased contributed substantially in developing a PAC library for drosophila that utilized a P1 virion based encapsidation and transfection process This library served prominently in the Drosophila Genome Project collaboration PACs proved easy to purify so that they substantially replaced the YACs used earlier Much of the early automation for massive clone picking and processing was developed at the collaborating Lawrence Berkeley National Laboratory However the P1 virion encapsidation system itself was too fastidious and P1 virion based methods did not gain popularity in other genome projects
