Crypto markets feel broken because the old four year halving framework is no longer enough.

Prices are struggling not due to failed narratives but because global liquidity is tightening The Bank of Japan is raising rates the Federal Reserve is cautious and capital is being drained from risk assets This does not mean the cycle is over It means the market is in the transition zone the most difficult phase where tightening hasn't ended and easing hasn't fully begun The real signal isn't on a chart It sits inside central bank plumbing specifically the Federal Reserve's Reserve Management Purchases RMP determines whether liquidity stabilizes beneath the market or continues to fade In Mastering Bitcoin and Altcoins in the QE Cycle Dwayne Anderson explains how to read these signals and survive this phase This is not a hype driven book It is a practical framework for macro driven markets You will learn why the halving couldn't save this phase how to track liquidity shifts why Bitcoin acts as the anchor and when altcoins only work once liquidity becomes excessive not merely stable The market will turn But most investors fail during the uncertainty before it does This book helps ensure you're still positioned when the real liquidity cycle begins
